

JUNE-2026

Looking Ahead: Anchoring Yields Amid Policy Vigilance

- We expect domestic yields to gradually drift downward, provided geopolitical tensions do not escalate further. While the RBI MPC has maintained its strict vigil on inflation—raising its CPI projection to 5.1%—the target remains manageably within the central bank's tolerance band.
- Furthermore, as the newly introduced Foreign Currency Non-Residents (FCNR) and External Commercial Borrowing (ECB) relief measures begin to draw in overseas capital, the resulting liquidity boost should put gentle downward pressure on yields, reaffirming our strategic shift toward capturing carry.

Our strategy?

- Looking at the RBI's detailed rules on Foreign Currency Non-Residents (FCNR) and overseas borrowing (External Commercial Borrowing (ECB) & Overseas Foreign Currency Borrowing (OFCB)), it is clear that raising interest rates will be their absolute last resort to keep the rupee stable. Also, because of these measures, we expect banks and public sector companies to issue fewer bonds.
- As foreign capital begins to flow in from FCNR accounts and overseas loans, domestic spreads on 2-to-3-year corporate bonds should compress. A reduced supply of new issuances in this segment will naturally heighten demand among mutual funds and banks. We intend to increase our allocation in 2-3 yrs corporate bonds particularly PSUs.
- In the money markets, even though overnight rates are sitting at 5.10%, the higher carry (YTM around 7.15% to 7.30%) on our short-term funds may still give us a cushion incase the yields move up. The high interest income makes this a great tactical moment to lock in these attractive yields. We intend to stay invested in this segment.

Which funds?

You want to park till quarter end?

- *DSP Ultra Short Fund (YTM ~7.3%)*: Currently yielding roughly ~215bp over overnight levels (5.10%). Despite the strong rally in CD rates, the high accrual (carry) provides an attractive opportunity. Its short duration (~0.5 years) makes it resilient to policy shifts.
- *DSP Liquidity Fund (YTM ~6.35%)*: Remains a reliable "pure" parking vehicle for immediate needs, capturing the current elevated money market rates.

You want to park a few months, crossing quarter end?

- *DSP Savings Fund (YTM ~7.15%)*: Yielding ~205bp over overnight rates. We are investing incremental flows in the March segment, as we continue to see value in the premia over overnight rates and we expect incremental CD issuance to reduce.
- For those who prioritize safety: *DSP Low Duration Fund (YTM ~7.15%)*: This 100% AAA-rated portfolio carries a duration of ~0.99 year. By holding this fund, you can potentially benefit from both the high accrual and potential MTM gains once supply reduces, resulting in spread compression.

You want to invest tactically for duration yields to fall in few months?:

- But you still want relatively lower volatility - *DSP Short Term Fund* and *DSP Banking & PSU Debt Fund* are the funds. They have relatively higher YTM (200bps above overnight). Duration is enough to give you capital gains - and between these 2 you can choose based on your risk preference (DSP Short Term Fund - 2.80y, DSP Banking & PSU Debt Fund - 3.80y). The low credit risk highlights the relatively better option.

You are sure that yields will fall lower in next few months and want to go all-in?

- Our *DSP Strategic Bond Fund* (~7.9 years) and *DSP Gilt Fund* (~11.10 years) are the ones. Again, mostly in AAA and Gilts, these funds can be a suitable option if G-sec yields fall.

What we like?

Investment choice is dependent on your needs, but we believe these funds are well suited in current markets:

DSP Ultra Short Fund - Low (duration) risk with high carry

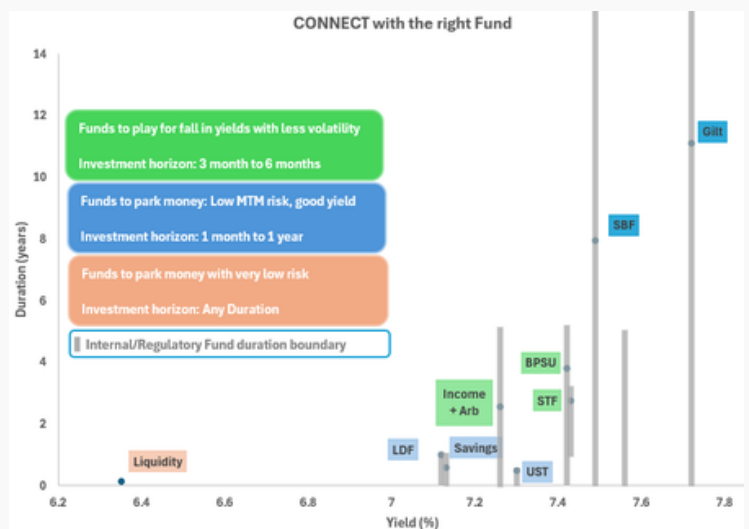

Money market yields have rallied big time in last week. However, the spreads are still attractive to stay invested. Also, its time to play for credit spreads as it provides a good carry option.

DSP Income Plus Arbitrage Omni Fund of Fund (Ex- DSP Income Plus Arbitrage Fund of Fund)

At a duration of 2.6y, the fund may moderately benefit from any rally in the market and the YTM of ~7.25% is reasonably high. The tax benefit is an added advantage.

Tactically: DSP Gilt Fund

At a duration of 11.10y, the fund provides a tactical opportunity for investors who believe that the curve is steep and yields can come down.

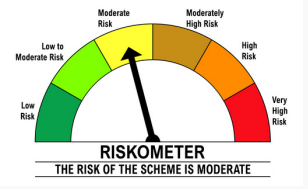

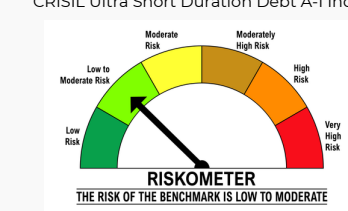

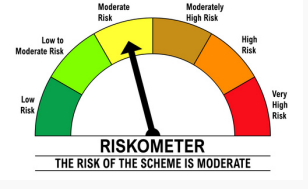

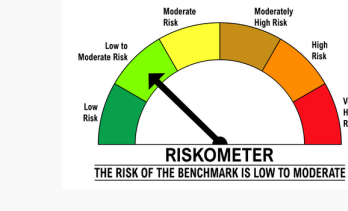

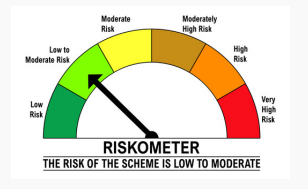

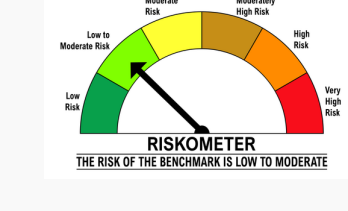

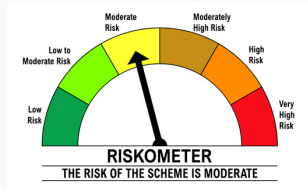

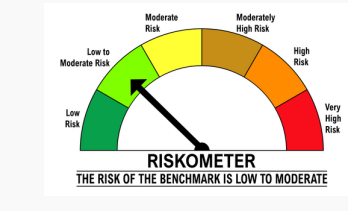

Source: YTM - Yield to Maturity, FX- Foreign Exchange, OMO - Open Market Operation, CIC - Currency in Circulation, MTM - Mark to Market. In the graph: Liquidity - DSP Liquidity Fund, Savings - DSP Savings Fund, UST - DSP Ultra Short Fund, LDF - DSP Low Duration Fund, Income + Arb - DSP Income Plus Arbitrage Omni FoF (Ex- DSP Income Plus Arbitrage Fund of Fund), STF - DSP Short Term Fund, BPSU - DSP Banking & PSU Debt Fund, SBF - DSP Strategic Bond Fund, Gilt - DSP Gilt Fund.
