SECTION I - INTRODUCTION

A. RISK FACTORS

Standard Risk Factors:

- Investment in mutual fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk, including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invest fluctuates, the value of your investment in the Scheme may go up or down. In addition to the factors that affect the value of individual investments in the Scheme, the NAV of the Scheme can be expected to fluctuate with movements in the broader equity and bond markets and may be influenced by factors affecting capital and money markets in general, such as, but not limited to, changes in interest rates, currency exchange rates, changes in Governmental policies, taxation, political, economic or other developments and increased volatility in the stock and bond markets.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The Sponsors are not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 1 lakh made by it towards setting up the Mutual Fund.
- The present Scheme is not a guaranteed or assured return Scheme.

Additional Risk Factors for Foreign Investors:

1. **Political Risk:**
Investments in mutual fund Units in India may be materially adversely impacted by Indian politics and changes in the political scenario in India either at the central, state or local level. Actions of the central government or respective state governments in the future could have a significant effect on the Indian economy, which could affect companies, general business and market conditions, prices and yields of securities in which the Schemes invest.
2. **Economic Risk:**
A slowdown in economic growth or macro-economic imbalances such as the increase in central and state level fiscal deficits may adversely affect investments in the country. The underlying growth in the economy is expected to have a direct impact on the volume of new investments in the country.
3. **Foreign Currency Risk:**
The Schemes are denominated in Indian Rupees (INR) which is different from the home currency for Foreign Portfolio Investors in the mutual fund Units. The INR value of investments when translated into home currency by Foreign Portfolio Investors could be lower because of the currency movements. The AMC does not manage currency risk for Foreign Portfolio Investors and it is the sole responsibility of the Foreign Portfolio Investors to manage or reduce currency risk on their own. The Sponsor/Fund/Trustees/ AMC are not liable for any loss to Foreign Investors arising from such changes in exchange rates.
4. **Convertibility and Transferability Risk:**
In the event capital and exchange controls are imposed by the government authorities, it would prevent Foreign Portfolio Investors' ability to convert INR into home currency and/or transfer funds outside India. The convertibility and transferability of INR proceeds into home currency is the responsibility of the Foreign Portfolio Investors.

Scheme Specific Risk Factors:

The scheme is an open-ended Fund of Funds scheme that intends to predominantly invest in units of schemes investing in Global & Indian Equity funds/ETFs & Fixed income funds/ ETFs. The Scheme may also invest a certain portion of its corpus in money market securities and/or money market/liquid schemes of DSP Mutual Fund, in order to meet liquidity requirements from time to time.

Hence scheme specific risk factors of such underlying schemes will be applicable. All risks associated with such schemes, including performance of their underlying stocks, derivative instruments, stock-lending, offshore investments etc., will therefore be applicable in the case of the Scheme. Investors who intend to invest in the Scheme are required to and deemed to have understood the risk factors of the underlying schemes.

Risk Factors specific to a Fund of Fund Scheme

- The Scheme's performance will predominantly depend upon the performance of the corresponding Underlying Funds and ETFs
- Any change in the investment policy or the fundamental attributes of the Underlying Fund in which the Scheme invests may affect the performance of the Scheme.
- Investments in the Underlying Funds and ETFs, which are equity funds, will have all the risks associated with investments in equity and the offshore markets.
- Investments in the Underlying Funds and ETFs, which are fixed income funds, will have all the risks associated with investments in fixed income securities and the offshore markets.
- The portfolio disclosure of the Scheme will be largely limited to the particulars of the relevant Underlying Fund and investments by the Scheme in money market instruments. Therefore, Unit Holders may not be able to obtain specific details of the Scheme in respect of the Underlying Fund's portfolio.
- The performance of the underlying Funds and ETFs depends on the ability of the respective Index to perform or Investment Managers to develop and implement investment strategies that achieve their investment objective. Moreover, any subjective decisions made by the Investment Manager may cause an underlying scheme to incur losses or to miss profit opportunities
- In addition to the recurring expenses of the Scheme, the Unit Holders shall also bear the applicable expenses of the Underlying Funds and ETFs. Therefore, the returns that the Unit Holder of the Scheme may receive, at times, be lower than the returns that a Unit Holder, who is directly investing in the same Underlying Funds, could obtain.

Risks associated with underlying schemes (Funds and/or ETFs):

- **Emerging Markets**

The following considerations, which apply to some extent to all international investments, are of particular significance in certain smaller and emerging markets. Funds investing in equities may include investments by the underlying funds/ETFs in certain smaller and emerging markets, which are typically those of poorer or less developed countries which exhibit lower levels of economic and/or capital market development, and higher levels of share price and currency volatility. The prospects for economic growth in a number of these markets are considerable and equity returns have the potential to exceed those in mature markets as growth is achieved. However, share price and currency volatility are generally higher in emerging markets.

Some governments exercise substantial influence over the private economic sector and the political and social uncertainties that exist for many developing countries are particularly significant. Another risk common to most such countries is that the economy is heavily export oriented and, accordingly, is dependent upon international trade. The existence of overburdened infrastructures and obsolete financial systems also presents risks in certain countries, as do environmental problems. Certain economies also depend to a significant degree upon exports of primary commodities and, therefore, are vulnerable to changes in commodity prices which, in turn, may be affected by a variety of factors. In adverse social and political circumstances, governments have been involved in policies of expropriation, confiscatory taxation, nationalization, intervention in the securities market and trade settlement, and imposition of foreign investment restrictions and exchange controls, and these could be repeated in the future. In addition to withholding taxes on investment income, some emerging markets may impose different capital gains taxes on foreign investors.

Generally accepted accounting, auditing and financial reporting practices in emerging markets may be significantly different from those in developed markets. Compared to mature markets, some emerging markets may have a low level of regulation, enforcement of regulations and monitoring of investors' activities. Those activities may include practices such as trading on material non-public information by certain categories of investor.

The securities markets of developing countries are not as large as the more established securities markets and have substantially less trading volume, resulting in a lack of liquidity and high price volatility. There may be a high concentration of market capitalization and trading volume in a small number of issuers representing a limited number of industries as well as a high concentration of investors and financial intermediaries. These factors may adversely affect the timing and pricing of the underlying fund/ETF's acquisition or disposal of securities.

Practices in relation to settlement of securities transactions in emerging markets involve higher risks than those in developed markets, in part because the underlying funds/ETFs will need to use brokers and counterparties which are less well capitalized, and custody and registration of assets in some countries may be unreliable. Delays in settlement could result in investment opportunities being missed if the underlying funds are unable to acquire or dispose-off a security. The custodian of the underlying funds is responsible for the proper selection and supervision of its correspondent banks in all relevant markets in accordance with applicable local and international law and regulation.

In certain emerging markets, registrars are not subject to effective government supervision nor are they always independent from issuers. The possibility of fraud, negligence, undue influence being exerted by the issuer or refusal to recognise ownership exists, which, along with other factors, could result in the registration of a shareholding being completely lost. Investors should therefore be aware that the underlying funds /ETFs could suffer losses arising from these registration problems, and as a result of archaic legal systems the underlying funds/ETFs may be unable to make a successful claim for compensation.

While the factors described above may result in a generally higher level of risk with respect to the individual smaller and emerging markets, these may be reduced when there is a low correlation between the activities of those markets and/or by the diversification of investments within the underlying funds.

Investments in certain countries are subject to certain heightened risks with regard to the ownership and custody of securities. In some countries, investment is evidenced by entries in the books of a company or its registrar (which is neither an agent nor responsible to the custodian of the underlying funds / ETFs. No certificates representing ownership of companies or securities in those countries will be held by the custodian of the underlying funds/ETFs or any correspondent or in an effective central depository system. As a result of this system and the lack of state regulation and enforcement, the underlying funds/ ETFs could lose their registration and ownership of such companies or securities through fraud, negligence or even mere oversight.

The underlying funds/ETFs, investing directly in such jurisdiction or countries, may limit their exposure to certain % of their respective Net Asset Value.

- **Sovereign Debt**

Certain developing countries are especially large debtors to commercial banks and foreign governments. Investment in debt obligations ("Sovereign Debt") issued or guaranteed by developing governments or their agencies and instrumentalities ("governmental entities") involves a high degree of risk. The governmental entity that controls the repayment of Sovereign Debt may not be able or willing to repay the principal and/or interest when due in accordance with the terms of such debt. A governmental entity's willingness or ability to repay principal and interest due in a timely manner may be affected by, among other factors, its cash flow situation, the extent of its foreign reserves, the availability of sufficient foreign exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the governmental entity's policy towards the International Monetary Fund and the political constraints to which a governmental entity may be subject. Governmental entities may also be dependent on expected disbursements from foreign governments, multilateral agencies and others abroad to reduce principal and interest arrearage on their debt. The commitment on the part of these governments, agencies and others to make such disbursements may be conditioned on a governmental entity's implementation of economic reforms and/or economic performance and the timely service of

such debtor's obligations. Failure to implement such reforms, achieve such levels of economic performance or repay principal or interest when due may result in the cancellation of such third parties' commitments to lend funds to the governmental entity, which may further impair such debtor's ability or willingness to service its debt on a timely basis. Consequently, governmental entities may default on their Sovereign Debt. Holders of Sovereign Debt, including -the underlying funds/ETFs, may be requested to participate in the rescheduling of such debt and to extend further loans to governmental entities. There is no bankruptcy proceeding by which Sovereign Debt on which a governmental entity has defaulted may be collected in whole or in part.

- **Global Financial Market Crisis and Governmental Intervention:**

Since 2007, global financial markets have undergone pervasive and fundamental disruption and suffered significant instability which has led to governmental intervention. Regulators in many jurisdictions have implemented or proposed a number of emergency regulatory measures. Government and regulatory interventions have sometimes been unclear in scope and application, resulting in confusion and uncertainty which in itself has been detrimental to the efficient functioning of financial markets. It is impossible to predict what additional interim or permanent governmental restrictions may be imposed on the markets and/or the effect of such restrictions on the ability to implement a Scheme's investment objective. Whether current undertakings by governing bodies of various jurisdictions or any future undertakings will help stabilise the financial markets is unknown. The Fund Managers cannot predict how long the financial markets will continue to be affected by these events and cannot predict the effects of these - or similar events in the future - on a Fund or global economy and the global securities markets. The Fund Managers are monitoring the situation. Instability in the global financial markets or government intervention may increase the volatility of the Funds and hence the risk of loss to the value of your investment.

- **Liquidity Risk:**

Trading volumes in the underlying investments of the Underlying schemes may fluctuate significantly depending on market sentiment. There is a risk that investments made by the Underlying schemes may become less liquid in response to market developments, adverse investor perceptions or regulatory and government intervention (including the possibility of widespread trading suspensions implemented by domestic regulators). In extreme market conditions, there may be no willing buyer for an investment and so that investment cannot be readily sold at the desired time or price, and consequently the relevant underlying schemes may have to accept a lower price to sell the relevant investment or may not be able to sell the investment at all. An inability to sell a particular investment or portion of assets can have a negative impact on the value of the Underlying schemes or prevent the relevant Underlying schemes from being able to take advantage of other investment opportunities.

Similarly, investment in equity securities issued by unlisted companies, small and mid-capitalisation companies and companies based in emerging countries are particularly subject to the risk that during certain market conditions, the liquidity of particular issuers or industries, or all securities within a particular investment category, will reduce or disappear suddenly and without warning as a result of adverse economic, market or political events, or adverse market sentiment.

Liquidity risk also includes the risk that relevant Underlying schemes may be forced to defer redemptions, issue in specie redemptions or suspend dealing because of stressed market conditions, an unusually high volume of redemption requests, or other factors beyond the control of the investment manager. To meet redemption requests, the Underlying schemes may be forced to sell investments at an unfavorable time and/or conditions, which may have a negative impact on the value of the Fund.

- **Credit Risk & Market Risk:**

To the extent that the underlying schemes invest in corporate debt securities, they are subject to the risk of an issuer's inability to meet interest and principal payments on its debt obligations (credit risk). Debt securities may also be subject to price volatility due to factors such as changes in credit rating, interest rates, general level of market liquidity and market perception of the creditworthiness of the issuer among others (market risk).

- Term Structure of Interest Rates (TSIR) Risk:**
 To the extent that the underlying schemes are invested in fixed income securities, the NAV of the Units issued under the Scheme is likely to be affected by changes in the general level of interest rates. When interest rates decline, the value of a portfolio of fixed income securities can be expected to rise. Conversely, when interest rates rise, the value of a portfolio of fixed income securities can be expected to decline.
- Country Risks associated with investments in international funds:**
 Country risk arises from the inability of a country to meet its financial obligations. It is the risk encompassing economic, social and political conditions in a foreign country which might adversely affect the interests of the Scheme.
- Concentration Risk:**
 The Scheme may be susceptible to an increased risk of loss, including losses due to adverse events that affect the Scheme's investments more than the market as a whole, to the extent that the Scheme's investments are concentrated in the securities and/or other assets of a particular issuer or issuers, country, group of countries, region, market, industry, group of industries, sector, market segment or asset class.
- Equity Risks:**
 The values of equities fluctuate daily and a Scheme investing in equities could incur significant losses. The price of equities can be influenced by many factors at the individual company level, as well as by broader economic and political developments, including changes in investment sentiment, trends in economic growth, inflation and interest rates, issuer-specific factors, corporate earnings reports, demographic trends and catastrophic events.
- Smaller Capitalisation Companies:**
 Securities of smaller capitalisation companies may, from time to time, and especially in falling markets, become illiquid and experience short-term price volatility and wide spreads between bid and offer prices. Investment in smaller capitalisation companies may involve higher risk than investment in larger companies. The securities of smaller companies may be subject to more abrupt or erratic market movements than larger, more established companies or the market average in general. These companies may have limited product lines, markets or financial resources, or they may be dependent on a limited management group. Full development of those companies takes time. In addition, many small company stocks trade less frequently and in smaller volume, and may be subject to more abrupt or erratic price movements than stocks of large companies. The securities of small companies may also be more sensitive to market changes than the securities of large companies. These factors may result in above-average fluctuations in the Net Asset Value of the shares of the underlying funds/ETFs.
- Depository Receipts Risk:**
 The issuers of certain depository receipts are under no obligation to distribute shareholder communications to the holders of such receipts, or to pass through to them any voting rights with respect to the deposited securities. Investment in depository receipts may be less liquid than the underlying shares in their primary trading market. Depository receipts may not necessarily be denominated in the same currency as the underlying securities into which they may be converted. In addition, the issuers of the stock underlying unsponsored depository receipts are not obligated to disclose material information in the United States.
- Restrictions on Foreign Investment:**
 Some countries prohibit or impose substantial restrictions on investments by foreign entities such as the underlying funds/ETFs. As illustrations, certain countries require governmental approval prior to investments by foreign persons, or limit the amount of investment by foreign persons in a particular company, or limit the investment by foreign persons in a company to only a specific class of securities which may have less advantageous terms than securities of the company available for purchase by nationals. Certain countries may restrict investment opportunities in issuers or industries deemed important to national interests. The manner in which foreign investors may invest in companies in certain countries, as well as limitations on such investments, may have an adverse impact on the operations of the underlying

funds/ETFs. For example, the underlying funds /ETFs may be required in certain of such countries to invest initially through a local broker or other entity and then have the share purchases re-registered in the name of -the underlying funds/ETFs. Re-registration may in some instances not be able to occur on a timely basis, resulting in a delay during which the underlying funds/ETFs may be denied certain of its rights as an investor, including rights as to IDCW or to be made aware of certain corporate actions. There also may be instances where the underlying funds/ETFs place a purchase order but are subsequently informed, at the time of re-registration, that the permissible allocation to foreign investors has been filled, depriving the underlying funds/ETFs of the ability to make their desired investment at the time. Substantial limitations may exist in certain countries with respect to the underlying funds/ETFs ability to repatriate investment income, capital or the proceeds of sales of securities by foreign investors. The underlying funds/ETFs could be adversely affected by delays in, or a refusal to grant any required governmental approval for repatriation of capital, as well as by the application to underlying funds/ETFs of any restriction on investments. A number of countries have authorised the formation of closed-end investment companies to facilitate indirect foreign investment in their capital markets. Shares of certain closed- end investment companies may at times be acquired only at market prices representing premiums to their net asset values. If the underlying funds/ETFs acquire shares in closed-end investment companies, shareholders would bear both their proportionate share of expenses in the underlying funds/ETFs (including management fees) and, indirectly, the expenses of such closed end investment companies. The underlying funds/ETFs also may seek, at their own cost, to create their own investment entities under the laws of certain countries.

- **Taxation of underlying schemes and assets:**

Investors should note in particular that the proceeds from the sale of securities in some markets or the receipt of any dividends and other income may be or may become subject to tax, levies, duties or other fees or charges imposed by the authorities in that market, including taxation levied by withholding at source. As a result, the Underlying Scheme (and therefore the Scheme) could become subject to additional taxation in such countries that is not anticipated either at the date of this SID or when investments are made, valued or disposed of.

Investors should note that there may be additional taxes, charges or levies applied in respect of the Scheme's investments depending on the location of the assets of the Underlying Funds and the jurisdiction in which the Underlying Funds is located, registered or operated. Investors should also note that the Underlying Fund's investment. managers and the Scheme's ability to provide tax information and audited accounts in respect of the Underlying Funds to Unit Holders of the Scheme is dependent on the relevant tax and other information being provided to the Underlying Funds in timely fashion. Accordingly, delays may occur in respect of delivery of such information to the Scheme's Unit Holders.

- **Currency Risk:**

Investments in the underlying funds/ETFs and similar other overseas mutual fund schemes are subject to currency risk. Returns to investors are the result of a combination of returns from investments and from movements in exchange rates. For example, if the Rupee appreciates vis-[^]-vis the US\$, the extent of appreciation will lead to a reduction in the yield to the investor. However, if the Rupee appreciates against the US\$ by an amount in excess of the interest earned on the investment, the returns can even be negative. Again, in case the Rupee depreciates vis-[^]-vis the US\$, the extent of depreciation will lead to a corresponding increase in the yield to the investor. Going forward, the Rupee may depreciate (lose value) or appreciate (increase value) against the currencies of the countries where the Scheme will invest.

- **Valuation Risk:**

The price the underlying scheme could receive upon the sale of a security or other asset may differ from the underlying scheme's valuation of the security or other asset and from the value used by the Underlying Index, particularly for securities or other assets that trade in low volume or volatile markets or that are valued using a fair value methodology as a result of trade suspensions or for other reasons. In addition, the value of the securities or other assets in the underlying scheme's portfolio may change on days or during time periods when shareholders will not be able to purchase or sell the Fund's shares. Authorized Participants who purchase or redeem Fund shares on days when the Fund is holding fair-valued securities

may receive fewer or more shares, or lower or higher redemption proceeds, than they would have received had the underlying scheme not fair-valued securities or used a different valuation methodology. The underlying Scheme's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

- **Risks Associated with Derivatives:**

The Underlying scheme may use derivatives in connection with its investment strategies. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the investment manager of the Underlying scheme to identify such opportunities. Identification and execution of the strategies to be pursued by the investment manager of the Underlying scheme involve uncertainty and decision of the investment manager of may not always be profitable. No assurance can be given that the investment manager of the Underlying Scheme will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in Securities and other traditional investments. Derivatives may be riskier than other types of investments because they may be more sensitive to changes in economic or market conditions than other types of investments and could result in the losses that significantly exceed the Underlying Scheme's original investment. Certain derivatives may give rise to a form of leverage. Due to the low margin deposits normally required in trading financial derivative instruments, an extremely high degree of leverage is typical for trading in financial derivative instruments. As a result, the Underlying Scheme may be more volatile than if the Underlying Funds had not been leveraged. A relatively small price movement in a derivative contract may result in substantial losses to the investor.

Derivatives are also subject to the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index. The use of derivatives for hedging or risk management purposes or to increase income or gain may not be successful, resulting in losses to the Underlying Scheme and the cost of such strategies may reduce the Underlying Fund's returns and increase the Underlying Scheme's potential for loss.

The Underlying Scheme may use derivatives to hedge market and currency risk, and for the purposes of efficient portfolio management. The use of derivatives may expose the Underlying Scheme to a higher degree of risk. In particular, derivative contracts can be highly volatile, and the amount of initial margin is generally small relative to the size of the contract so that transactions are geared.

The Underlying Scheme may take short positions on a security through the use of financial derivative instruments in the expectation that their value will fall in the open market. The possible loss from taking a short position on a security differs from the loss that could be incurred from a cash investment in the security; the former may be unlimited as there is no restriction on the price to which a security may rise, whereas the latter cannot exceed the total amount of the cash investment. The short selling of investments may also be subject to changes in regulations, which could impose restrictions that could adversely impact returns to investors.

- **Risks of Exchange Traded Transactions:**

The securities exchange on which the shares of the Underlying Funds may be listed may have the right to suspend or limit trading in all securities which it lists. Such a suspension would expose the Underlying Scheme to losses and delays in its ability to redeem shares.

- **Legal risk:**

OTC Derivatives, Repurchase and Reverse Repurchase transactions, Securities Lending and Re-used Collateral: There is a risk that agreements and derivatives techniques are terminated due, for instance, to bankruptcy, supervening illegality or change in tax or accounting laws. In such circumstances, an underlying scheme may be required to cover any losses incurred. Furthermore, certain transactions are entered into on the basis of complex legal documents. Such documents may be difficult to enforce or may be the subject of a dispute as to

interpretation in certain circumstances. Whilst the rights and obligations of the parties to a legal document may for example be governed by English or Luxembourg law, in certain circumstances (for example insolvency proceedings) other legal systems may take priority which may affect the enforceability of existing transactions.

- **Securities Lending:**

The underlying schemes may engage in securities lending. The underlying schemes engaging in securities lending will have a credit risk exposure to the counterparties to any securities lending contract. Scheme investments can be lent to counterparties over a period of time. A default by the counterparty combined with a fall in the value of the collateral below that of the value of the securities lent may result in a reduction in the value of the underlying schemes.

- **Risks Relating to Repurchase Agreements:**

In the event of the failure of the counterparty with which collateral has been placed, the underlying schemes may suffer loss as there may be delays in recovering collateral placed out or the cash originally received may be less than the collateral placed with the counterparty due to inaccurate pricing of the collateral or market movements.

- **Repurchase and Reverse Repurchase Agreements:**

Under a repurchase agreement an underlying scheme sells a security to counterparty and simultaneously agrees to repurchase the security back from the counterparty at an agreed price and date. The difference between the sale price and the repurchase price establishes the cost of the transaction. The resale price generally exceeds the purchase price by an amount which reflects an agreed-upon market interest rate for the term of the agreement. In a reverse repurchase agreement a underlying schemes purchases an investment from a counterparty which undertakes to repurchase the security at an agreed resale price on an agreed future date. The underlying schemes therefore bears the risk that if the seller defaults the Fund might suffer a loss to the extent that proceeds from the sale of the underlying securities together with any other collateral held by the underlying schemes in connection with the relevant agreement may be less than the repurchase price because of market movements. A underlying schemes cannot sell the securities which are the subject of a reverse repurchase agreement until the term of the agreement has expired or the counterparty has exercised its right to repurchase the securities.

- **Cybersecurity Risk:**

Failures or breaches of the electronic systems of the underlying scheme, the underlying scheme's adviser, distributor, the Index Provider and other service providers, market makers, Authorized Participants or the issuers of securities in which the underlying scheme invests have the ability to cause disruptions, negatively impact the underlying scheme's business operations and/or potentially result in financial losses to the underlying scheme and its shareholders.

- **Infectious Illness Risk:**

An outbreak of an infectious respiratory illness, COVID 19, caused by a novel coronavirus has resulted in travel restrictions, disruption of healthcare systems, prolonged quarantines, cancellations, supply chain disruptions, lower consumer demand, layoffs, ratings downgrades, defaults and other significant economic impacts. Certain markets have experienced temporary closures, extreme volatility, severe losses, reduced liquidity and increased trading costs. Such events can have an impact on the underlying Schemes and could impact their ability to purchase or sell securities or cause elevated tracking error and increased premiums or discounts to the NAV. Other infectious illness outbreaks in the future may result in similar impacts.

- **Operational Risk:**

The underlying schemes are exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures.

- **Counterparty Risk:**
An underlying scheme will be exposed to the credit risk of the parties with which it transacts and may also bear the risk of settlement default. Credit risk is the risk that the counterparty to a financial instrument will fail to discharge an obligation or commitment that it has entered into with the relevant underlying scheme. This would include the counterparties to any derivatives, repurchase / reverse repurchase agreement or securities lending agreement that it enters into. Trading in derivatives which have not been collateralised gives rise to direct counterparty exposure.

- **Collateral risk:**
Although collateral may be taken to mitigate the risk of a counterparty default, there is a risk that the collateral taken, especially where it is in the form of securities, when realised will not raise sufficient cash to settle the counterparty's liability. This may be due to factors including inaccurate pricing of collateral, failures in valuing the collateral on a regular basis, adverse market movements in the value of collateral, a deterioration in the credit rating of the issuer of the collateral, or the illiquidity of the market in which the collateral is traded. Where an underlying scheme is in turn required to post collateral with a counterparty, there is a risk that the value of the collateral it places with the counterparty is higher than the cash or investments received by it. In either case, where there are delays or difficulties in recovering assets or cash, collateral posted with counterparties, or realising collateral received from counterparties, the underlying schemes may encounter difficulties in meeting redemption or purchase requests or in meeting delivery or purchase obligations under other contracts. As an underlying scheme may reinvest cash collateral it receives, there is a risk that the value on return of the reinvested cash collateral may not be sufficient to cover the amount required to be repaid to the counterparty. In this circumstance, the underlying scheme would be required to cover the shortfall. In case of cash collateral reinvestment, all risks associated with a normal investment will apply. As collateral will take the form of cash or certain financial instruments, the market risk is relevant. Collateral received by an underlying scheme may be held either by the Depository or by a third party custodian. In either case, there may be a risk of loss where such assets are held in custody, resulting from events such as the insolvency or negligence of a custodian or sub-custodian.

- **Sustainability Risk:**
The risk arising from any environmental, social or governance events or conditions that, were they to occur, could cause material negative impact on the value of the investments in the underlying schemes. Specific sustainability risk can vary for each product and asset class, and include but are not limited to:
 - **Transition Risk:** The risk posed by the exposure to issuers that may potentially be negatively affected by the transition to a low carbon economy due to their involvement in exploration, production, processing, trading and sale of fossil fuels, or their dependency upon carbon intensive materials, processes, products and services. Transition risk may result to several factors, including rising costs and/or limitation of greenhouse gas emissions, energy-efficiency requirements, reduction in fossil fuel demand or shift to alternative energy sources, due to policy, regulatory, technological and market demand changes. Transition risk may negatively affect the value of investments by impairing assets or by increasing liabilities, capital expenditures, operating and financing costs.

 - **Physical Risk:** The risk posed by the exposure to issuers that may potentially be negatively affected by the physical impacts of climate change. Physical risk includes acute risks arising from extreme weather events such as storms, floods, droughts, fires or heatwaves, and chronic risks arising from gradual changes in the climate, such as changing rainfall patterns, rising sea levels, ocean acidification, and biodiversity loss. Physical risk may negatively affect the value of investments by impairing assets, productivity or revenues or by increasing liabilities, capital expenditures, operating and financing costs.

 - **Social Risk:** The risk posed by the exposure to issuers that may potentially be negatively affected by social factors such as poor labour standards, human rights violations, damage to public health, data privacy breaches, or increased inequalities.

Social risk may negatively affect the value of investments by impairing assets, productivity or revenues or by increasing liabilities, capital expenditures, operating and financing costs.

- **Governance Risk:** The risk posed by the exposure to issuers that may potentially be negatively affected by weak governance structures. For companies, governance risk may result from malfunctioning boards, inadequate remuneration structures, abuses of minority shareholders or bondholders rights, deficient controls, aggressive tax planning and accounting practices, or lack of business ethics. For countries, governance risk may include governmental instability, bribery and corruption, privacy breaches and lack of judicial independence. Governance risk may negatively affect the value of investments due to poor strategic decisions, conflict of interest, reputational damages, increased liabilities or loss of investor confidence.
- **Expense Risks associated with investments in international funds:**
In respect of the corpus of the Scheme that is invested in international funds, investors shall bear the proportionate recurring expenses of such underlying scheme(s), in addition to the recurring expenses of the Scheme. Therefore, the returns attributable to such investments by the Scheme may be impacted or may, at times, be lower than the returns that the investors could obtain by directly investing in the said underlying scheme(s).
- **Portfolio Disclosure Risks associated with investments in international funds:**
The disclosures of portfolio for the Scheme will be limited to the particulars of the underlying schemes and money market securities where the Scheme has invested. Investors may, therefore, not be able to obtain specific details of the investments of the underlying schemes.
- **Investment Policy and/or fundamental attribute change risks associated with investments in international funds:**
Any change in the investment policies or fundamental attributes of any underlying scheme is likely to affect the performance of the Scheme.

Other Risk associated with underlying ETFs:

- **Authorized Participant Concentration Risk:**
Only an Authorized Participant may engage in creation or redemption transactions directly with the underlying ETF, and none of those Authorized Participants is obligated to engage in creation and/or redemption transactions.

The underlying ETF has a limited number of institutions that may act as Authorized Participants on an agency basis (i.e., on behalf of other market participants). To the extent that Authorized Participants exit the business or are unable to proceed with creation or redemption orders with respect to the underlying ETF and no other Authorized Participant is able to step forward to create or redeem, shares in the underlying ETF may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting.
- **Index-Related Risk:**
There is no guarantee that the underlying ETF's investment results will have a high degree of correlation to those of the Underlying Index or that the underlying ETF will achieve its investment objective. Market disruptions and regulatory restrictions could have an adverse effect on the underlying ETF's ability to adjust its exposure to the required levels in order to track the Underlying Index. Errors in index data, index computations or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the Index Provider for a period of time or at all, which may have an adverse impact on the underlying ETF. Unusual market conditions may cause the Index Provider to postpone a scheduled rebalance, which could cause the Underlying Index to vary from its normal or expected composition.
- **Passive Investment Risk:**
The underlying ETF is not actively managed, and the fund manager generally does not attempt to take defensive positions under any market conditions, including declining markets.

- **Tracking Error Risk:**
The underlying ETF may be subject to tracking error, which is the divergence of its performance from that of the Underlying Index. Tracking error may occur because of differences between the securities and other instruments held in the ETF portfolio and those included in the Underlying Index, pricing differences (including, as applicable, differences between a security's price at the local market close and the ETF's valuation of a security at the time of calculation of the Fund's NAV), transaction costs incurred by the ETF, the holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, the requirements to maintain pass through tax treatment, portfolio transactions carried out to minimize the distribution of capital gains to shareholders, acceptance of custom baskets, changes to the Underlying Index or the costs to the ETF of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the ETF incurs fees and expenses, while the Underlying Index does not.

Risks Associated with Investment in Money Market Instruments

The following risks are applicable to the extent of the Scheme's investment in money market instruments:

- **Market Liquidity Risk:** The liquidity of investments made in the Scheme may be restricted by trading volumes, settlement periods and transfer procedures. Although the investment universe constitutes securities which will have high market liquidity, there is a possibility that market liquidity could get impacted on account of company/sector/general market related events and there could be a price impact on account of portfolio rebalancing and/or liquidity demands on account of redemptions. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. There have been times in the past, when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct further transactions. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Schemes are uninvested and no return is earned thereon. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. By the same token, the inability to sell securities held in the Schemes' portfolios, due to the absence of a well-developed and liquid secondary market for debt securities, would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Schemes' portfolios. Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.
- **Credit Risk:** Fixed income securities (debt and money market securities) are subject to the risk of an issuer's inability to meet interest and principal payments on its debt obligations. The Investment Manager will endeavour to manage credit risk through in-house credit analysis. Different types of securities in which the Schemes would invest as given in the SID carry different levels of credit risk. Accordingly, the Schemes' risk may increase or decrease depending upon their investment patterns. E.g. corporate bonds carry a higher amount of risk than Government securities. Further, even among corporate bonds, bonds which are rated AAA are comparatively less risky than bonds which are AA rated.
- **Rating Migration Risk:** Fixed income securities are exposed to rating migration risk, which could impact the price on account of change in the credit rating. For example: One notch downgrade of a AAA rated issuer to AA+ will have an adverse impact on the price of the security and vice-versa for an upgrade of a AA+ issuer.
- **Term Structure of Interest Rates (TSIR) Risk:** The NAV of the Schemes' Units, to the extent that the Schemes are invested in fixed income securities, will be affected by changes in the general level of interest rates. When interest rates decline, the value of a portfolio of fixed income securities can be expected to rise. Conversely, when interest rates rise, the value of a portfolio of fixed income securities can be expected to decline.
- **Re-investment Risk:** The investments made by the Scheme are subject to reinvestment risk.

This risk refers to the interest rate levels at which cash flows received from the securities in the Schemes are reinvested. The additional income from reinvestment is the 'interest on interest' component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

Risks associated with investing in Tri Party Repo (TREPS):

DSP mutual fund is a member of Securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India Limited (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally by CCIL which helps reduce the settlement and counterparty risks for these transactions. CCIL manages the risks through its risk management processes such that the ultimate risk to its members from fails is either eliminated or reduced to the minimum. CCIL thus maintains margin and default fund contributions of each member for various business segments as per the terms of its Bye Laws, Rules and Regulations to cover potential losses arising from the default member.

In an event of any clearing member failing to honor settlement obligations, the margin and default Fund is utilized to complete the settlement. As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been utilized, CCIL's own contribution is used to meet the losses and thereafter any residual loss is appropriated from the contributions of the non-defaulting members.

Thus the scheme is subject to risk of the margin and default fund contribution being appropriated in the case of failure of any settlement obligations. Further, the scheme's contribution may be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

The risk factors may undergo change in case the CCIL notifies securities other than Government of India securities as eligible for contribution as collateral.

Risks Associated With Transaction in Units through Stock Exchange Mechanism:

In respect of transactions in Units of the Scheme through NSE and/or BSE and/or IEX or any other recognized stock exchange, allotment and redemption of Units on any Business Day will depend upon the order processing/settlement by NSE, BSE, IEX or such other exchange and their respective clearing corporations on which the Mutual Fund has no control. Further, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by NSE, BSE, IEX or such other recognized exchange in this regard.

RISK MANAGEMENT STRATEGIES

DSPAM is committed to a strong control and compliance environment and ensuring that the management structure is appropriate to the scale of the business. DSPAM's fiduciary business is managed according to the rules and a regulation stipulated for Asset Management Companies by the Securities & Exchange Board of India (SEBI) and also incorporates DSPAM's internal policies.

The AMC has systems and processes to monitor all the investment restrictions specified by SEBI and in this document on a regular basis.

Risk management for Risk Associated with Underlying Schemes

- **Liquidity Risk on account of investments in international funds:** The investments are made in international funds, which provide daily liquidity. However there exists a possibility that different settlement cycles and foreign exchange conversion could lead to delay in receipt of redemption proceeds. To mitigate this risk, daily cash management monitoring is performed by the Investment Manager by taking into consideration future cash flows on account of redemptions as well as subscriptions into/from the domestic fund. The endeavor is to maintain an adequate liquidity cushion in Indian Rupee terms by making investments in very short-term money market instruments and/or liquid schemes in India.
- **Expense Risks associated with investments in international funds:** Any increase in the expense

structure of the international funds is not expected to have any impact as the aggregate of expenses incurred by the Indian Fund-of-Funds scheme and the underlying international funds is subject to limits prescribed by SEBI.

- Portfolio Disclosure Risks associated with investments in international fund: Although full portfolio disclosure is not available at the end of each month, top ten holdings as well as sector holdings are made available periodically for the international fund. Full portfolio holdings can be obtained from underlying international funds with a three months lag i.e. March portfolio can be obtained at the end of June.
- Investment Policy and/or fundamental attribute change risks associated with investments in international funds: Investments are made in such international funds, which have similar investment objectives to the domestic fund in India. However there exists possibility that there is a change in the fundamental attributes of the international fund. In such circumstances, the Investment Manager will seek to invest in other international funds, which have the same investment objective as the domestic fund.
- Risks associated with investments in the underlying funds/ETFs - special risk consideration related to international fund: To the extent of the investments in the underlying funds/ETFs the risks of the underlying funds/ETFs will exist. However, as part of our due diligence, we have chosen funds, which have long term performance track record, stability of fund management team and are accredited by third party funds evaluators like S&P, Morningstar etc. Further the Investment managers periodically reviews the tracking errors for monitoring the performance of the underlying ETFs.

Risk management for Risks Associated with Investment in Money Market Instruments

- Market Liquidity Risk: The liquidity risk will be managed and/or sought to be addressed by creating a portfolio which has adequate access to liquidity. The Investment Manager will select fixed income securities, which have or are expected to have high secondary market liquidity. Market Liquidity Risk will be managed actively within the portfolio liquidity limits. The first access to liquidity is through cash and fixed income securities. The investment in unlisted securities will be minimal.
- Credit Risk: Credit Risk associated with fixed income securities will be managed by making investments in securities issued by borrowers, which have a good credit profile. The credit research process includes a detailed in-house analysis and due diligence. Limits are assigned for each of the issuer (other than government of India); these limits are for the amount as well as maximum permissible tenor for each issuer. The credit process ensures that issuer level review is done at inception as well as periodically by taking into consideration the balance sheet and operating strength of the issuer.
- Term Structure of Interest Rates (TSIR) Risk: The Investment Manager will endeavour to actively manage the duration based on the ensuing market conditions. As the investments of the Scheme are very short duration in nature, the risk can be expected to be small.
- Rating Migration Risk: The endeavour is to invest in high grade/quality securities. The due diligence performed by the fixed income team before assigning credit limits and the periodic credit review and monitoring should address company-specific issues.
- Re-investment Risk: Re-investment Risk is prevalent for fixed income securities, but as the investments of the Scheme are short duration in nature, the impact can be expected to be small.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme shall have a minimum of 20 investors each and no single investor shall account for more than 25% of the corpus of the Scheme. These conditions shall be complied with, in each calendar quarter on an average basis, as specified by SEBI. In case of non-fulfillment of the condition of 20 investors in a calendar quarter, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations shall become applicable automatically without any reference from SEBI, and accordingly the Scheme shall

be wound up and the units redeemed at the relevant applicable NAV. If there is breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be available and thereafter, the investor who is in breach of the rule, shall be given 15 days notice to redeem his exposure over the 25% limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

C. SPECIAL CONSIDERATIONS

- Subject to the SEBI (MF) Regulations, funds managed by the associates of the Sponsors may invest either directly or indirectly in the Schemes and may acquire a substantial portion of the Schemes' Units and collectively constitute a majority investor in the Schemes. Accordingly, redemption of Units held by such funds may have an adverse impact on the value of the Units of the Schemes because of the timing of any such redemption and may impact the ability of other Unit Holders to redeem their respective Units.
- As the liquidity of the Schemes' investments may sometimes be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for redemption of Units may be significant in the event of an inordinately large number of redemption requests or of a restructuring of the Schemes' portfolios. In view of this, the Trustee has the right, in its sole discretion, to limit redemptions under certain circumstances.
- Neither the SID and SAI, nor the Units have been registered in any jurisdiction. Such investment opportunities may be pursued by the AMC provided they are considered appropriate in terms of the overall investment objectives of the Scheme.

Easy access, transparent regulations and a breadth of variety in terms of classes of investors have contributed to investor confidence in the stability and functioning of global markets. Besides, better access to information on the financial health of many foreign companies helps portfolio managers make informed investment decisions.

Although these benefits are very attractive, one must not lose sight of the fact that risks also exist with regard to investments in foreign markets. These include fluctuating currency prices, relevant regulations of exchanges/countries, financial reporting standards, liquidity and political instability among others

OVERVIEW OF THE UNDERLYING FUNDS WHERE THE SCHEME WILL INVEST:

BlackRock Global Funds - Global Allocation Fund

Basis of selection of the underlying fund	BGF - GAF is Undertaking for Collective Investment in Transferable Securities (UCITS) III Fund approved by Commission for the Supervision of the Financial Sector, Luxembourg, with BlackRock (Luxembourg) S.A. as the management company. BGF - GAF seek to maximize capital growth expressed in US dollars. The fund has a flexible approach to investment. It typically holds securities diversified across asset class, geographies, sectors and market capitalization. Apart from leveraging on the global expertise and backing of a strong team of investment professionals at BlackRock, the predominant reason for our selecting the underlying fund is the investment philosophy of identification of attractive and structural investment themes on a global basis through detailed analysis.
Investment Objective	The investment objective of the fund is to provide high total investment return through a fully managed investment policy utilizing global equity securities, debt and money market securities, the combination of which will be varied from time to time both with respect to types of securities and markets in response to changing market and economic trends.
Investment Strategy of the BGF - GAF	The Strategy embraces the following three key principles in seeking to achieve its investment objective: Flexible: Flexible mandate and broad investment universe enables the team to adapt as markets change Diversified: Broadly diversified investment solution that typically invests in over 40 countries and 30 currencies across traditional and non-traditional asset classes, sectors and capital structures Risk-aware: Mission to deliver a competitive rate of return with less volatility than a global stock portfolio over a full market cycle
Long Term drivers of the BGF - GAF	The Team aims is to generate small amounts of alpha over a wide range of securities, with the goal of achieving substantial alpha without dependence on a few securities. Given the Fund's flexible and diversified investment mandate across asset classes, currencies, regions, sectors and securities, the sources of alpha may vary as a result of market conditions.
Investment Process	The Team employs a disciplined process that combines macro regime identification, asset allocation and fundamental, bottom-up security selection augmented by quantitative research and analytics. Through this process, the team seeks to add value across a broadly diversified investment universe in order to identify undervalued investment opportunities while mitigating macroeconomic risks. The investment universe is comprised of global equities, fixed income, cash equivalents, and currencies.

The Fund may invest in individual securities, baskets of securities or particular measurements of value or rate, and may consider a variety of factors and systematic inputs.

The portfolio managers are responsible for setting the overall investment strategy including the top-down asset allocation, portfolio-level positioning, and risk profile. Macro regime identification informs the top-down asset allocation and takes into account a variety of factors including but not limited to inflation, central bank policies and interest rates. A weekly Investment Strategy Group meeting of the portfolio managers is the main forum for setting top-down asset allocation and for reviewing portfolio targets for a wide range of portfolio exposures and risk management. In addition to the weekly strategy meetings, a deliberate and disciplined framework exists for daily fundamental security selection, quantitative strategies, portfolio construction and platform oversight.

Portfolio managers collaborate on investment decisions and engage the greater investment team in the process. This engagement occurs from both a bottom-up security selection and top-down asset allocation perspective. Fundamental analysts are primarily categorized by global sector along with some regional specialization, and focus on high conviction ideas from bottom-up security selection. They conduct independent research and have the flexibility to pursue ideas across the capital stack. While the Team considers a wide array of macro and micro factors and company specifics, valuation is a key factor that serves as the basis for most investment choices.

The number of issuers covered by each individual will vary over time and may depend on a number of factors including domain expertise and years of experience; in general most of the fundamental analysts are expected to cover approximately 20 to 30 issuers. There is no set limit or minimum number of securities covered by the Team.

Portfolio optimization tools assist portfolio managers in the sizing of positions and help calibrate top-down asset allocation decisions.

Both fundamental and quantitative analysis are integral to the research process and help the Team seek to identify potential opportunities and monitor each security held in the portfolio. While the Team examines a wide array of macro and micro factors and company and industry specifics, key considerations include a combination of expected free cash flow generation along with various relative valuation metrics, including P/E, P/CF, P/B, and EV/EBITDA.

Cash flow analysis is also particularly useful when evaluating security desirability across a single company's entire capital structure. Longer-term structural themes are often key components to an analysts' projections of a company's future cash flow potential.

Valuation metrics can differ across sectors and securities given some measures are more appropriate than others, e.g. the use of P/B in analysing financial companies. Leverage, both financial and operational, is another material consideration that the team's analysts incorporate into their research.

Analysts are required to provide a detailed investment thesis - including a conviction level and price target - for each equity security offered to the portfolio managers for potential inclusion within the portfolio. Both the conviction levels and price targets are recorded in the Team's proprietary research tool, Mosaic, and are available for all team members to view.

Within credit, the Team focuses on cash flow analysis, balance sheet evaluation, yield/spread considerations, duration, and currency analysis in order to identify attractive investments. Credit analysis from BlackRock's broader fixed income group is also incorporated within Mosaic and leveraged by the Team.

	<p>There are no specific criteria that must be met as each security is evaluated on its own merits and potential contribution to overall portfolio risk.</p> <p>Quantitative research may be used to express specific style factor views, develop customized strategies and employ the use of derivatives to equitize cash flows, hedge market volatility and gain market access in an efficient manner. Close collaboration allows fundamental research to inform strategies in some cases.</p> <p>The Team uses quantitative investment tools and BlackRock resources to augment its fundamental research to further evaluate portfolio positioning. Given its broad and diversified investment mandate, we believe it is important to analyze and understand the securities owned within the Fund, as well as securities the portfolio does not own. Tools include:</p> <ul style="list-style-type: none"> • Mosaic: A research platform that is typically used by the investment team to monitor portfolio exposures as well as facilitate analysis of the investment universe across a broad range of factors and fundamental data. The tool incorporates fundamental and quantitative information to gather insights, both proprietary and third-party. <p>Beyond research and screening on individual securities, Mosaic also provides a platform for a transparent research record for collaboration across analysts, key metrics, portfolio construction tools, and risk and performance analytics.</p> <ul style="list-style-type: none"> • Aladdin Research: A communications platform that serves as a centralized repository for various forms of research, including proprietary and third-party research, that may focus on an issuer, industry, sector country or macroeconomic trend. Many pieces are simply data or company/sector/market views that do not necessarily coincide with the particular views of the investment team. In fact, it is common for an analyst or portfolio manager to post a research piece to Aladdin Research to provide an alternative view regarding a particular asset class or market outlook. • Global Allocation Risk Dashboard: A quantitative tool that serves as a guide for portfolio positioning and risk management.

strategies and accommodates many investment philosophies.

Regardless of investment strategy, all of our client portfolios are managed under a single risk management philosophy. We believe that risks for portfolios should be:

Deliberate: Every bet in the portfolio is intended by the portfolio manager and not simply a by-product of their investment process.

Diversified: Asset diversification does not always deliver risk diversification; check that the assumptions about correlation are robust and up to date.

Scaled: The level of each risk position should be appropriate to the degree of conviction about that position and the risk tolerance of the portfolio.

The following summarizes risk management at BlackRock.

Risk management is a core part of BlackRock's culture	Risk management is knowing the risks based on a thorough review of every investment	Everyone at BlackRock seeks to rely on one consistent set of information	Risk managers need to help investors understand and manage risks	Meeting the reasonable expectation of clients helps protect BlackRock's reputation

BlackRock's emphasis on risk management serves to meet the team's objective of generating a competitive return within a risk-controlled investment framework. BlackRock's Risk & Quantitative Analysis (RQA) group partners with the team to ensure risk is deliberate, diversified and scaled. RQA independently produces and provides risk assessment, performance attribution, stress testing, and risk alignment for the portfolio. RQA acts as an independent risk manager within the firm and has separate

reporting lines.

The team evaluates risk on both absolute and relative terms. The portfolio is not mandated to be managed to a specific tracking error or standard deviation and there are no restrictions or ranges on either metric. Historically, the strategy has exhibited approximately 1/3rd less volatility than global stocks and a comparable level of volatility to its reference benchmark.

RQA

Risk Assessment

- RQA monitors dozens of active risk factors globally on a continuous basis
- Helps Global Allocation team ensure the portfolio is not unintentionally overexposed to specific top-down factors
- Risk cannot (and should not) be entirely eliminated, but it can (and must) be identified

Performance Attribution

- Review cumulative effect of investment decisions to identify factors contributing to, and subtracting from, alpha generation.
- Comprehensive portfolio attribution includes asset class, country, sector, currency, and individual security analysis.

Stress Testing

- Allows the PM team to pro-actively estimate how changes in identified market prices affect the portfolio in relative and absolute terms
- Enables team to quantify portfolio effects of specific market scenarios rather, than relying on intuition

Risk Alignment

- Regularly scheduled meetings between RQA and Global Allocation team help ensure current portfolio positioning is consistent with team's market views.

Fund Risks

Credit risk: Changes to interest rates and/or issuer defaults will have a significant impact on the performance of fixed income securities. Potential or actual credit rating downgrades may increase the level of risk.

The issuer of a financial asset held within the Fund may not pay income or repay capital to the Fund when due.

Equity Risk: The value of equities and equity-related securities can be affected by daily stock market movements. Other influential factors include political, economic news, company earnings and significant corporate events.

Derivative Exposure: Derivatives are highly sensitive to changes in the value of the asset on which they are based and can increase the size of losses and gains, resulting in greater fluctuations in the value of the Fund. The impact to the Fund can be greater where derivatives are used in an extensive or complex way.

	<p>Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.</p> <p>Liquidity Risk: Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily.</p> <p>Emerging Market Risk: Emerging markets are generally more sensitive to economic and political conditions than developed markets. Other factors include greater 'Liquidity Risk', restrictions on investment or transfer of assets and failed/delayed delivery of securities or payments to the Fund.</p>

Overview of Overseas Debt Market

The nature and number of debt instruments available in international debt markets is very wide. In terms of diverse instruments as well as liquidity, overseas debt markets offer great depth and are extremely well developed. Investment in international debt greatly expands the universe of top quality debt, which is no longer restricted to the limited papers available in the domestic debt market. The higher rated overseas sovereign, quasi-government and corporate debt offer lower default risk in addition to offering a high degree of liquidity since these are traded across major international markets. Investments in rated international debt offer multiple benefits of risk reduction, a much wider universe of top quality debt and also potential gains from currency movements.

Investments in international markets are most often in U.S. dollars, though the Euro, Pound Sterling and the Yen are also major currencies. Though this market is geographically well-spread across global financial centers, the markets in the U.S., European Union and London offer the most liquidity and depth of instruments.

Besides factors specific to the country / issuer, international bond prices are influenced to a large extent by a number of other factors; chief among these are the international economic outlook, changes in interest rates in major economies, trading volumes in overseas markets, cross currency movements among major currencies, rating changes of countries / corporations and major political changes globally.

3. IDCW Policy

i) Growth Option

Under this option, the Mutual Fund will not declare any IDCW. The income earned by the Scheme will remain invested in the Scheme and will be reflected in the NAV. This Option is suitable for investors who are not looking for current income but who have invested only with the intention of capital appreciation. Moreover, if Units under this Option are held as a capital asset for a period of greater than 36 months from the date of acquisition, Unit Holders should get the benefit of long term capital gains tax. Please refer the section “A. Tax Benefit of Investing in the Mutual Funds” in the SAI.

(ii) Income Distribution cum Capital Withdrawal option (IDCW)

The above options are suited for investors seeking income through IDCW declared by the Schemes. Only Unit Holders opting for such option(s) will receive IDCW. Under these options, the Schemes envisage declaring IDCW comprising substantially of net income and realized gains.

The options stated in point (ii) above, in turn offer two suboptions i.e. “Payout IDCW” or “Reinvest IDCW”

• Payout IDCW

As per the SEBI (MF) Regulations, the Mutual Fund shall despatch to the Unit Holders, IDCW warrants within 7 Working Days from the record date for declaration of the IDCW. IDCW will be payable to those Unit Holders whose names appear in the Register of Unit Holders on the date (Record Date). IDCW will be paid by cheque, net of taxes as may be applicable. Unit Holders will also have the option of direct payment of IDCW to the bank account. The cheques will be drawn in the name of the sole/first holder and will be posted to the Registered address of the sole/first holder as indicated in the original application form entirely at the risk of the unitholders. **To safeguard the interest of Unit Holders from loss or theft of IDCW cheques, investors should provide the name of their bank, branch and account number in the application form. IDCW cheques will be sent to the Unit Holder after incorporating such information.**

If the IDCW amount payable (net of tax deducted at source, wherever applicable) under the IDCW Payout sub-option of the Schemes is for an amount equal to or less than Rs. 100/- then such IDCW will compulsorily and automatically reinvested in the Scheme/ Plan by issuing additional Units of the Scheme under Regular Plan/ Direct Plan at the Applicable NAV on the next Business day after the Record Date. There shall be no load on IDCW so reinvested.

Reinvestment of Income Distribution cum Capital Withdrawal option (IDCW)

Under this sub-option, IDCW will be reinvested by way of additional Units of the Scheme instead of being paid out. Such reinvestment will be at the applicable NAV on the next Business Day after the Record Date. There shall however, be no entry load/exit load, if any, on the IDCW so reinvested. The IDCW so reinvested shall be constructive payment of IDCW to the Unit Holders and constructive receipt of the same amount from each Unit Holder, for reinvestment in Units. The additional Units issued under this option and held as capital asset would get the benefit of long term capital gains if sold after being held for greater than 36 months. For this purpose, 36 months will be computed from the date when such additional Units are issued/allotted.

Effect of IDCW: The NAV of the Unit Holders in IDCW Option, Monthly IDCW Option, Daily IDCW Reinvest Option and Weekly IDCW Option will stand reduced by the amount of IDCW declared.

On declaration of IDCW, the NAV of the respective IDCW option will further stand reduced by the applicable statutory levy/surcharge/cess/any other statutory levy. Notwithstanding varying rates of statutory levies, the IDCW NAV will remain the same for all categories of investors in a particular option, though the amount of IDCW received by Unit Holders may vary depending on the category of each Unit Holder.

For details on taxation of IDCW please refer the SAI.

4. Minimum amount for Application/Redemption/ switches

5. Ongoing price for subscription (Purchase Price) / switch-in from other schemes/ plans by investor

(This is the price you need to pay for purchase/switch-in)

6. Ongoing price for redemption (sale) /switch outs (to other Scheme/plans of the Mutual Fund)/intra-Plan switching by investors (Redemption Price)

(This is the price you will receive for redemptions/switch outs)

The Redemption Price of the Units will be calculated on the basis of the Applicable NAV subject to prevailing Exit Load, if any. In the case of Schemes which currently have no Exit Load, the Redemption Price will be the Applicable NAV. In the case of Schemes having an Exit Load or in which an Exit Load is introduced, the Redemption Price will be calculated as under:

Redemption Price = Applicable NAV x (1 - Exit Load)

Illustration:

Say, Applicable NAV = Rs. 12.0000 and the Exit Load is 0.50%,

Redemption Price = 12 x (1-0.005) = Rs. 11.9400.

Investors may note that the Trustee has the right to modify the existing Load Structure in any manner or introduce an Exit Load or a combination of Exit Load and/or any other Load subject to a maximum as prescribed under the SEBI (MF) Regulations. OTP will be sent to either email id or mobile number registered in the folio and the Unit holder have to confirm on the OTP received. On successful validation only, the subscriptions / systematic registration will be accepted and processed.

18. Redemption

Units can be redeemed (sold back to the Mutual Fund) at the relevant Redemption Price. The redemption requests can be made on the pre-printed forms (transaction slip/common transaction form) or by using the form at the bottom of the account statement.

The redemption request can be submitted at any of the Official Points of Acceptance of transaction, the details of which are mentioned at the end of this SID. As all allotments are provisional, subject to realization of payment instrument and subject to the AMC having been reasonably satisfied that the Mutual Fund has received clear funds, any redemption or switch out transaction in the interim is liable to be rejected at the sole discretion of the AMC.

A unit Holder may request redemption of a specified amount or a specified number of Units only. If the redemption request is made for a specified amount and the number of Units is also specified by the Unit Holder, the number of Units specified will be considered for deciding the redemption amount. Unit Holders may also request for redemption of their entire holding and close the account by indicating the same at an appropriate place in the transaction slip/common transaction slip.

It may, however, be noted that in the event of death of the Unit Holder, the nominee or legal heir, (subject to production of requisite documentary evidence to the satisfaction of the AMC) as the case may be, shall be able to redeem the investment at any point of time.

In case an investor has purchased Units on more than one day (either under the NFO period or through subsequent purchase) the Units purchased first (i.e. those Units which have been held for the longest period of time), will be deemed to have been redeemed first, i.e. on a First-In-First-Out basis.

In case the Units are standing in the names of more than one Unit Holder, where mode of holding is specified as 'Joint', redemption requests will have to be signed by all joint holders. However, in cases of holding specified as 'Anyone or Survivor', any one of the Units Holders will have the power to make redemption requests, without it being necessary for all the Unit Holders to sign. However, in all cases, the proceeds of the redemption will be paid to the first-named holder only.

Redemption or repurchase proceeds shall be dispatched to Unit Holders within 5 Working Days from the date of redemption or repurchase.

Investor may note that in case of exceptional scenarios as prescribed by AMFI vide its communication no. AMFI/ 35P/ MEM-COR/ 74 / 2022-23 dated January 16, 2023 read with clause 14.1.3 of SEBI Master Circular the AMC may not be able to adhere with the timelines prescribed above.

Unit holders are advised to submit their requests for change in bank mandate atleast 10 days prior to date of redemption/IDCW payment, if any.

The redemption cheque will be issued in favour of the sole/first Unit Holder's registered name and bank account number, if provided, and will be sent to the registered address of the sole/first Holder as registered with the Registrar. The redemption cheque/demand draft will be payable at par at all the places where the official points of acceptance of transaction are located. Bank charges for

collection of cheques at all other places will be borne by the Unit Holder. With a view to safeguarding their interest, it is desirable that Unit Holders indicate their Bank Account No., name of the bank and branch in the application for purchasing Units of the Scheme. A fresh account statement will also be sent/emailed to redeeming investors, indicating the new balance to the credit in the account, along with the redemption cheque.

Unit holders are requested to note that application for redemption or switch out for units for which funds are not realized via purchase or switch-in in the Scheme of the Fund shall be liable to be rejected. In other words, redemption of units will be processed only if the funds for such units are realized in the Scheme by a way of payment instructions/transfer or switch-in funding process.

The proceeds towards redemptions and IDCW will be dispatched by a reasonable mode of despatch like courier, post, etc. in case of cheque/demand draft or directly credited to the bank account (as per the details mentioned by the investor) in case of direct credit facility, entirely and solely at the risk of the investor. The Mutual Fund will endeavour to remit redemption proceeds via electronic means, as made available by RBI. Where such electronic means are not available or feasible under any circumstances, the Mutual Fund will remit the redemption proceeds by way of cheques. The investor will not hold the Mutual Fund or the AMC or the Registrar responsible for any non-receipt or delay of receipt of redemption & IDCW proceeds due to any negligence or deficiency in service by the courier company, postal authorities or the bank executing direct credits, or due to incorrect bank account details provided by the investor.

In case of redemptions, Unit holders should note that Two Factor Authentication [2FA] is mandatory for all redemption / switches including STP/SWP submitted through electronic mode. OTP will be sent to either email id or mobile number registered in the folio and the Unit holder have to confirm on the OTP received. On successful validation only, the redemptions will be accepted and processed.

- **Redemption by NRIs and FPIs**

Credit balances in the account of an NRI/FPI investor may be redeemed by such investors in accordance with the procedure described above and subject to the procedures laid down by RBI, if any. Such redemption proceeds will be paid by means of a Rupee cheque payable to the NRI's/FPIs drawn at the then rates of exchange less bank charges, subject to RBI procedures and approvals.

- **Effect of Redemption**

On redemption, the unit capital and reserves will stand reduced by an amount equivalent to the product of the number of Units redeemed and the Redemption Price as on the date of redemption. Units once redeemed will be extinguished and will not be re-issued.

- **Fractional Units**

Since a request for purchase is generally made in Rupee amounts and not in terms of number of Units of the Scheme, a Unit Holder may be left with fractional Units. Fractional Units will be computed and accounted for up to three decimal places. However, fractional Units will, in no way, affect the Unit Holder's ability to redeem the Units, either in part or in full, standing to his/her/its credit.

- **Redemption by investors transacting through the Stock Exchange mechanism**

Investors who wish to transact through the stock exchange shall place orders for redemptions as currently practiced for secondary market activities. Investors must submit the Delivery Instruction Slip to their Depository Participant on the same day of submission of redemption request, within such stipulated time as may be specified by NSE/BSE, failing which the transaction will be rejected. Investors shall seek redemption requests in terms of number of Units only and not in Rupee amounts. Redemption amounts shall be paid by the AMC to the bank mandate registered with the Depository Participant.

- **Redemption by investors who hold Units in dematerialized form**

Redemption request for Units held in demat mode shall not be accepted at the offices of the Mutual Fund/AMC/Registrar. Unit holders shall submit such request only through their respective Depository Participant or through Stock Exchange mechanism platform.

As per SEBI (MF) Regulations, the Mutual Fund shall despatch the redemption proceeds within 5 Working Days from the date of acceptance of redemption request. The new tax regime would be the default tax regime from FY 2023-24 onwards.

^The Finance Act, 2022 has levied the surcharge to be at par with Equity Oriented Scheme with effect from 1 April 2022

**In case company opts for new regime of taxation, then the surcharge would be applicable at the rate of 10% irrespective of the taxable income.

!Specified Mutual Fund" means a Mutual Fund by whatever name called, where not more than thirty five per cent. of its total proceeds is invested in the equity shares of domestic companies. Finance Act 2023 has inserted Section 50AA in the Income Tax Act, 1961. As per the said section, with effect from 1 April 2023, gains/losses from units of Specified Mutual Fund would be deemed to be short term capital gain/loss irrespective of period of holding i.e. the definition of holding for more than 36 months to be considered as long term capital asset is withdrawn. This is applicable for all such units which are acquired on or after Apr 1, 2023.

*The Finance Act 2021 introduced special provisions for higher rate of TDS in case of non-filers of Income tax return (referred to as "specified person"). Specified person does not include a non-resident who does not have permanent establishment in India. Finance Act 2023, with effect from 1st April, 2023, amended the said proviso to also exclude a person who is not required to furnish the return of income for the assessment year relevant to the said previous year and is notified by the Central Government in the Official Gazette in this behalf.

Any person entitled to receive any sum or income or amount, on which tax is deductible under Chapter XVIIIB (hereafter referred to as deductee), shall furnish his Permanent Account Number to the person responsible for deducting such tax (hereafter referred to as deductor), failing which tax shall be deducted at the higher of the following rates, namely:

- (i) at the rate specified in the relevant provision of this Act; or
- (ii) at the rate or rates in force; or
- (iii) at the rate of twenty per cent.

The aforesaid provision dealing with higher taxation in the absence of furnishing Permanent Account Number shall not apply to a non-resident with effect from 1st June, 2016 on furnishing the following details and documents by such non-resident:

- (i) name, e-mail id, contact number;
- (ii) address in the country or specified territory outside India of which the non-resident is a resident;
- (iii) a certificate of his being resident in any country or specified territory outside India from the Government of that country or specified territory if the law of that country or specified territory provides for issuance of such certificate;
- (iv) Tax Identification Number of the non-resident in the country or specified territory of his residence and in case no such number is available, then a unique number on the basis of which the non-resident is identified by the Government of that country or the specified territory of which he claims to be a resident.

In case of investments by NRIs in closed ended funds during NFO, at the time of redemption of units, TDS will be deducted at the applicable rate. However, in respect of those Unit Holders who have acquired the units on the Stock Exchange post listing of units, the Unit Holders would need to provide a certificate from a Chartered Accountant certifying the details of acquisition of units to the Fund within two days of maturity of the Scheme, so as to enable the Fund to deduct TDS at the applicable rates. In the event of such details not being provided, the Fund would deduct TDS on the redemption proceeds at the highest rate of TDS applicable.

For further details on taxation please refer to the clause on Taxation in the SAI.

Tax Chapter for investment in Overseas securities

The information is provided for general information only. This information does not purport to be a complete analysis of all relevant tax considerations; nor does it purport to be a complete description of all potential tax costs, tax incidence and risks for the investors. In view of the individual nature of the implications, each investor is advised to consult his or her own tax advisors/authorized dealers with respect to the specific amount of tax and other implications arising out of his or her participation in the schemes.

I. Luxembourg securities

Taxation on investment in Luxembourg investment funds

There are no withholding taxes on dividends paid by Luxembourg investment funds.

The fund being Non-residing investors (individuals or corporations) are exempt from taxation in Luxembourg on capital gains realized upon sale of their shares in a Luxembourg corporate investment fund (even in cases where they held a substantial shareholding of more than 10%).

II. Ireland securities

Taxation on investment in an Irish Fund

Where a Shareholder is not resident (or ordinarily resident) in Ireland for Irish tax purposes, an Irish Fund should not deduct any Irish tax in respect of the Shareholder's Shares. In order for the non-Irish resident shareholder to be exempt from Irish Investment Undertaking Tax ("IUT"), it must complete the relevant non-resident declaration and provide a copy of that declaration to the Irish Fund. The declaration may also be provided by an Intermediary who holds Shares on behalf of non-Irish Resident Shareholders provided that, to the best of the Intermediary's knowledge, the Shareholders are not resident (or ordinarily resident) in Ireland.

If this declaration is not received by an Irish Fund (and in the absence of written notice of approval from Revenue Commissioners being obtained by the Irish Fund dispensing with the requirement to provide such a declaration), an Irish Fund should deduct Irish tax in respect of the shares held by the non-Irish Resident Shareholder. An Irish Fund should also deduct Irish tax if the Irish Fund has information which reasonably suggests that a Shareholder's declaration is incorrect. A Shareholder will generally have no entitlement to recover such Irish tax. An Irish Fund must be informed if a Shareholder becomes Irish tax resident.

Generally, Shareholders who are not Irish tax resident will have no other Irish tax liability with respect to their Shares. However, if a Shareholder is a company which holds its Shares through an Irish branch or agency, the Shareholder may be liable to Irish corporation tax in respect of profits and gains arising in respect of the Shares (on a self-assessment basis).

In case if the fund is deemed to be a Non-Exempt Shareholders then a Shareholder is subject to tax (e.g. because it has not provided the required non-resident declaration), an Irish Fund should deduct Irish tax on distributions, redemptions and transfers and, additionally, on 'eighth anniversary' events, as described below.

Distributions from an Irish Fund

If an Irish Fund pays a distribution to a non-exempt Shareholder, an Irish Fund should deduct Irish tax from the distribution. The amount of Irish tax deducted will be:

1. 25% of the distribution; where the distribution is paid to a shareholder who is an Irish resident company which has made the relevant declaration for the 25% rate to apply.
2. 41% of the distribution in all other cases.

Redemptions and transfer of shares

If an Irish Fund redeems Shares held by a non-exempt Shareholder, an Irish Fund should deduct Irish tax from the redemption payment made to the Shareholder. Similarly, if a non-exempt Shareholder transfers (by sale or otherwise) an entitlement to Shares, an Irish Fund will account for Irish Investment Undertaking tax in respect of that transfer. The amount of Irish tax deducted or accounted for will be calculated by reference to the gain (if any) which has accrued to the Shareholder on the Shares being redeemed or transferred and will be equal to:

1. 25% of such gain; where the shareholder is an Irish resident company which has made the appropriate declaration for the 25% rate to apply;
2. 41% of the gain in all other cases.

If Shares are not denominated in euro, a Shareholder may be liable (on a self-assessment basis) to Irish capital gains taxation on any currency gain arising on the redemption or transfer of the Shares.

“Eighth Anniversary” Events

If a non-exempt Shareholder does not dispose of Shares within eight years of acquiring them, the Shareholder will be deemed for Irish tax purposes to have disposed of the Shares on the eighth anniversary of their acquisition (and any subsequent eighth anniversary). On such deemed disposal, an Irish Fund will account for Irish tax in respect of the increase in value (if any) of those Shares over that eight-year period. The amount of Irish tax accounted for will be equal to:

1. 25% of the increase in value of the shares where the Shareholder is a company which has made the appropriate declaration for the 25% rate to apply;
2. 41% of the increase in value in all other cases.

Any Irish tax paid in respect of the increase in value of Shares over the eight-year period may be set off on a proportionate basis against any future Irish tax which would otherwise be payable in respect of those Shares and any excess may be recovered on an ultimate disposal of the Shares.

Share Exchanges

Where a Shareholder Exchanges Shares on arm’s length terms for other Shares in the Irish Fund and no payment is received by the Shareholder, an Irish Fund should not deduct Irish tax in respect of the exchange.

Stamp Duty on transacting in shares

No Irish stamp duty (or other Irish transfer tax) will apply to the issue, transfer or redemption of Shares. If a Shareholder receives a distribution in specie of assets from the ICAV, a charge to Irish stamp duty could potentially arise.

Taxation on investment in Irish Exchange Traded Funds (ETFs)

Similar to active funds, ETFs are exempt from Irish tax on income and gains derived from their investments and are not subject to Irish tax on their net asset value. As such income and gains arising to an ETF are allowed to accumulate gross of Irish tax.

Non-Irish Resident Shareholders do not suffer any Irish tax on the occurrence of a chargeable event (e.g. distribution or redemption) provided that the relevant non-resident declaration has been provided to the fund. If the relevant declaration is not in place the ETF may be obliged to withhold tax at the appropriate rate. However, withholding tax does not need to be applied in the event that shares are held in a recognized clearing system (regardless of whether or not there is a declaration in place).

D. COMPUTATION OF NAV

NAV of Units under the Scheme/Plan may be calculated by either of the following methods shown below:

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme/Plan's investments} + \text{Current Assets} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under the Scheme/Plan}}$$

Or

$$\text{NAV (Rs.)} = \frac{\text{Unit Capital + Reserves and Surplus}}{\text{No. of Units outstanding under the Scheme/Plan}}$$

N.B.: The aforesaid provisions pertaining to “Calculation of NAV”, shall apply in respect of each individual Scheme and/or plan as the case may be.

The NAV will be calculated as of the close of every Business Day. NAVs will be rounded off to four decimal places. The valuation of the Schemes' assets and calculation of the Schemes' NAVs shall be subject to audit on an annual basis and such regulations as may be prescribed by SEBI from time to time.

NAV is calculated and announced on each Business Day.

The numerical illustration of the above method is provided below.

Market or Fair Value of Scheme's investments (Rs.) = 11,42,53,650.00

Current Assets (Rs.) = 10,00,000.00

Current Liabilities and Provisions (Rs.) = 5,00,000.00

No. of Units outstanding under the Scheme = 1,00,00,000

$$\text{NAV Per Unit (Rs.)} = \frac{11,42,53,650.00 + 10,00,000.00 - 5,00,000.00}{1,00,00,000} = 11.4754$$

Note: In respect of Schemes having Growth and IDCW Options, there will be more than one NAV, one for each Option, after the declaration of the first IDCW by that Scheme.

Since this Scheme invests predominantly in units of BGF - GAF and other similar overseas mutual fund schemes, the NAV of the Scheme for a business day (Day T) will be based on the NAV of the underlying fund for that day (Day T). Since the NAV of the underlying fund for a business day (Day T) would normally be available either late in the evening of the business day (Day T) or on the following business day (T+1), the Scheme will declare the NAV for a Business day on the next Business Day, based on the NAV of the underlying fund for the business day for which the NAV is declared (Day T).

Illustration: Relating to computation and publication of NAV of the Scheme for a business day (Day T)

Day T	Business day for which NAV is to be declared
Day T late evening or Day T+1 early morning	Underlying fund will publish their NAV
Day T+1 by 10.00 a.m.	AMC will compute the NAV of the Scheme for Day T AMC will publish the NAV of the Scheme for Day on its website, upload the same on AMFI website and disseminate to the Press
Day T+1 10.00 a.m.	Newspapers will publish the NAV of the Scheme applicable for Day T.

Valuation of the scheme's assets, calculation of the scheme's NAV and the accounting policies & standards will be subject to such norms and guidelines that SEBI may prescribe from time to time and shall be subject to audit on an annual basis.

Valuation of Foreign Exchange Conversion: On the valuation day, all the assets and liabilities in foreign currency will be valued in Indian Rupees on the basis of Foreign Exchange rate quoted on Bloomberg/Reuters around India markets close time (which is currently around 3:30 p.m. IST) or at the RBI Reference rate as at the close of the Banking hours on that day in India. The Trustees/AMC reserves the right to change the source for determining the exchange rate. The reasons for the change in the source for determining the exchange rate will be recorded in writing. The Rupee value of Investments valued in the manner described above and other assets and liabilities represented in foreign currency shall be obtained by multiplying the aforesaid rate.

For the current applicable structure, investors may refer the website of the AMC www.dspim.com or call at 1800- 200-44-99 (toll free) or may contact their distributor.
