SECTION I - INTRODUCTION

A. RISK FACTORS

Standard Risk Factors:

- Investment in mutual fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk, including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invest fluctuates, the value of your investment in the Scheme may go up or down. In addition to the factors that affect the value of individual investments in the Scheme, the NAV of the Scheme can be expected to fluctuate with movements in the broader equity and bond markets and may be influenced by factors affecting capital and money markets in general, such as, but not limited to, changes in interest rates, currency exchange rates, changes in Governmental policies, taxation, political, economic or other developments and increased volatility in the stock and bond markets.
- Past performance of the Sponsors/AMC/Mutual Fund does not guarantee future performance of the scheme.
- The name of the scheme does not in any manner indicate either the quality of the scheme or its future prospects and returns.
- The Sponsors are not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 1 lakh made by it towards setting up the Mutual Fund.
- The present Scheme is not a guaranteed or assured return Scheme.

Additional Risk Factors for Foreign Portfolio Investors:

1. Political Risk

Investments in mutual fund Units in India may be materially adversely impacted by Indian politics and changes in the political scenario in India either at the central, state or local level. Actions of the central government or respective state governments in the future could have a significant effect on the Indian economy, which could affect companies, general business and market conditions, prices and yields of securities in which the Scheme invest.

The occurrence of selective unrest or external tensions could adversely affect the political and economic stability of India and consequently have an impact on the securities in which the Scheme invests. Delays or changes in the development of conducive policy frameworks could also have an impact on the securities in which the Scheme invests.

2. Economic Risk

A slowdown in economic growth or macro-economic imbalances such as the increase in central and state level fiscal deficits may adversely affect investments in the country. The underlying growth in the economy is expected to have a direct impact on the volume of new investments in the country.

3. Foreign Currency Risk

The Scheme is denominated in Indian Rupees (INR) which is different from the home currency for Foreign Investors in the mutual fund Units. The INR value of investments when translated into home currency by Foreign Investors could be lower because of the currency movements. The AMC does not manage currency risk for foreign investors and it is the sole responsibility of the Foreign Investors to manage or reduce currency risk on their own. The Sponsor/Fund/Trustees/AMC are not liable for any loss to Foreign Investors arising from such changes in exchange rates.

4. Convertibility and Transferability Risk

In the event capital and exchange controls are imposed by the government authorities, it would prevent Foreign Investors' ability to convert INR into home currency and/or transfer funds outside India. The convertibility and transferability of INR proceeds into home currency is the responsibility of the Foreign Investors.

Scheme Specific Risk Factors

• Market Liquidity Risk:

The liquidity of investments made in the Scheme may be restricted by trading volumes, settlement periods and transfer procedures.

Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. There have been times in the past, when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct further transactions. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are uninvested and no return is earned thereon. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. By the same token, the inability to sell securities held in the Scheme' portfolios, due to the absence of a well developed and liquid secondary market for debt securities, would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme' portfolios.

Money market securities, while fairly liquid, lack a well developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.

• Market Liquidity Risk with fixed rate Government securities:

Even though the Government securities market is more liquid compared to other debt instruments, on occasion, there could be difficulties in transacting in the market due to extreme volatility leading to constriction in market volumes. Liquidity of the Scheme may suffer in case any relevant guideline issued by RBI undergoes any adverse changes.

Credit Risk:

Fixed income securities (debt and money market securities) are subject to the risk of an issuer's inability to meet interest and principal payments on its debt obligations. The Investment Manager will endeavour to manage credit risk through in-house credit analysis.

Different types of securities in which the Scheme would invest as given in the SID carry different levels of credit risk. Accordingly, the Scheme' risk may increase or decrease depending upon their investment patterns. E.g. corporate bonds carry a higher amount of risk than Government securities. Further, even among corporate bonds, bonds which are rated AAA are comparatively less risky than bonds which are AA rated.

• Rating Migration Risk:

Fixed income securities are exposed to rating migration risk, which could impact the price on account of change in the credit rating. For example: One notch downgrade of a AAA rated issuer to AA+ will have an adverse impact on the price of the security and vice-versa for an upgrade of a AA+ issuer.

• Term Structure of Interest Rates (TSIR) Risk:

The NAV of the Scheme' Units, to the extent that the Scheme are invested in fixed income securities, will be affected by changes in the general level of interest rates. When interest rates decline, the value of a portfolio of fixed income securities can be expected to rise. Conversely, when interest rates rise, the value of a portfolio of fixed income securities can be expected to decline.

• Re-investment Risk:

The investments made by the Scheme are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the 'interest on interest' component. The risk is that the rate

at which interim cash flows can be reinvested may be lower than that originally assumed.

• Market Risk related to equity and equity related securities:

Equity shares and equity related instruments are volatile and prone to price fluctuations on a daily basis. Investments in equity shares and equity related instruments involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risks.

· Risk associated with floating rate securities:

To the extent the Scheme' investments are in floating rate debt instruments or fixed debt instruments swapped for floating rate return, they will be affected by: Interest rate movement (Basis Risk) -Coupon rates on floating rate securities are reset periodically in line with the benchmark index movement. Normally, the interest rate risk inherent in a floating rate instrument is limited compared to a fixed rate instrument. Changes in the prevailing level of interest rates will likely affect the value of the Scheme' holdings until the next reset date and thus the value of the Scheme' Units. The value of securities held by the Scheme generally will vary inversely with changes in prevailing interest rates. The Mutual Fund could be exposed to interest rate risk (i) to the extent of time gap in the resetting of the benchmark rates, and (ii) to the extent the benchmark index fails to capture interest rate changes appropriately; Spread Movement (Spread Risk) - Though the basis (i.e. benchmark) gets readjusted on a regular basis, the spread (i.e. markup) over benchmark remains constant. This can result in some volatility to the holding period return of floating rate instruments; Settlement Risk (Counterparty Risk) - Specific floating rate assets may also be created by swapping a fixed return into a floating rate return. In such a swap, there is the risk that the counterparty (who will pay floating rate return and receive fixed rate return) may default; Liquidity Risk: The market for floating rate securities is still in its evolutionary stage and therefore may render the market illiquid from time to time, for such securities that the Scheme are invested in.

• Risks associated with mid-cap and small-cap companies:

The Investment Manager has defined the market capitalization spectrum as follows:

- (a) Large Cap: 1st -100th company in terms of full market capitalization
- (b) Mid Cap: 101st -250th company in terms of full market capitalization
- (c) Small Cap: 251st company onwards in terms of full market capitalization

Investment in mid-cap and small-cap companies are based on the premise that these companies have the ability to increase their earnings at a faster pace as compared to large- cap companies and grow into larger, more valuable companies. However, as with all equity investments, there is a risk that such companies may not achieve their expected earnings results, or there could be an unexpected change in the market, both of which may adversely affect investment results.

Historically, it has been observed that as you go down the capitalization spectrum i.e. from large-cap stocks to mid-cap stocks and beyond, there are higher risks in terms of volatility and market liquidity. Scheme also invests in mid-cap and small-cap companies and hence is exposed to associated risks.

Pharmaceutical and Healthcare Sector Concentration Risk:

The Scheme predominately focuses in equities of selected companies in pharmaceutical and associated sectors. Consequently, the NAV of the Scheme is linked to the equity performance of such companies and may be more volatile than a more diversified portfolio of equities, as the returns are subject to the sector's performance and dynamics.

• Risks associated with Pharmaceutical and Healthcare Companies:

The Scheme is sectoral in nature, hence will be affected by the risks associated with the Pharmaceutical and Healthcare companies in India such as:

- (a) Pricing of drugs is subject to price control and any reduction in prices of bulk drugs/formulations manufactured by pharmaceutical companies may affect the valuation of the concerned companies adversely.
- (b) High competition in the generics market may impact the margins of Indian pharmaceutical companies.
- (c) Other barriers for growth of pharmaceutical companies could be inadequate patent infrastructure, weak redressal system for patent infringement etc.
- (d) INR appreciation may hit pharmaceutical companies' competitiveness and margins
- (e) Healthcare companies are often subject to regulatory interventions, M&As and litigations, which could impact the prospects of the companies that the scheme would invest in

• Security Concentration Risk:

The relatively high percentage of Scheme's assets invested in a limited number of equity and equity related securities may expose the portfolio to higher levels of volatility vis-à-vis other equity oriented schemes. However as observed in various research under modern portfolio theory and investment analysis, while the first 20 stocks reduce the portfolio's risk significantly, the additional stocks between 20 and 1,000 reduce the portfolio's risk very marginally. Although the investment universe constitutes securities which will have high market liquidity, there is a possibility that market liquidity could get impacted on account of company/sector/general market related events and there could be a price impact on account of portfolio rebalancing and/or liquidity demands on account of redemptions.

· Risks associated with trading in derivatives:

The use of derivatives may expose Scheme to a higher degree of risk. In particular, derivative contracts can be highly volatile, and the amount of initial margin is generally small relative to the size of the contract so that transactions may be leveraged in terms of market exposure. A relatively small market movement may have a potentially larger impact on derivatives than on standard bonds or equities. Leveraged derivative positions can therefore increase Scheme volatility.

Derivatives require the maintenance of adequate controls to monitor the transactions and the embedded market risks that they add to the portfolio. Besides the price of the underlying asset, the volatility, tenor and interest rates affect the pricing of derivatives. Other risks in using derivatives include but are not limited to:

- a) **Counterparty Risk** this occurs when a counterparty fails to abide by its contractual obligations and therefore, the Scheme are compelled to negotiate with another counter party, at the then prevailing (possibly unfavourable) market price. For exchange traded derivatives, the risk is mitigated as the exchange provides the guaranteed settlement but one takes the performance risk on the exchange.
- b) Market Liquidity Risk this occurs where the derivatives cannot be transacted due to limited trading volumes and/or the transaction is completed with a severe price impact.
- c) Model Risk the risk of mis-pricing or improper valuation of derivatives.
- d) Basis Risk arises due to a difference in the price movement of the derivative vis-à-vis that of the security being hedged.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued involve uncertainty and decision of the Investment Manager may not always be profitable. No assurance can be given that the Investment Manager will be able to identify or execute such strategies. Some other risks investors must read carefully before making any investments in this Scheme, as it is expected to make investments in equity derivatives are as follows:

Derivative trades involve execution risks, whereby the rates seen on the screen may not be the rate at which ultimate execution takes place.

- a. The option buyer's risk is limited to the premium paid.
- b. Investments in index/stock futures face the similar risk as the investments in the underlying stock or index.
- c. Risk of loss in trading in futures contracts can be substantial, because of the low margin deposits required, the extremely high degree of leverage involved in futures pricing and potentially high volatility of the futures markets.
- d. The derivatives market may not have the volumes that may be seen in other developed markets, which may result in volatility in the values.
- e. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Risks associated with investments in Securitised Assets

A securitization transaction involves sale of receivables by the originator (a bank, non-banking finance company, housing finance company, or a manufacturing/service company) to a Special Purpose Vehicle (SPV), typically set up in the form of a trust. Investors are issued rated Pass Through Certificates (PTCs), the proceeds of which are paid as consideration to the originator. In this manner, the originator, by selling his loan receivables to an SPV, receives consideration from investors much before the maturity of the underlying loans. Investors are paid from the collections of the underlying loans from borrowers. Typically, the transaction is provided with a limited amount of credit enhancement (as stipulated by the rating agency for a target (rating), which provides protection to investors against defaults by the underlying borrowers.

Some of the risk factors typically analyzed for any securitization transaction are as follows:

- 1. Risks associated with asset class: Underlying assets in securitised debt may assume different forms and the general types of receivables include commercial vehicles, auto finance, credit cards, home loans or any such receipts. Credit risks relating to these types of receivables depend upon various factors including macroeconomic factors of these industries and economies. Specific factors like nature and adequacy of collateral securing these receivables, adequacy of documentation in case of auto finance and home loans and intentions and credit profile of the borrower influence the risks relating to the asset borrowings underlying the securitised debt.
- 2. Risks associated with pool characteristics:
- a) Size of the loan: This generally indicates the kind of assets financed with loans. While a pool of loan assets comprising of smaller individual loans provides diversification, if there is excessive reliance on very small ticket size, it may result in difficult and costly recoveries.
- b) Loan to Value Ratio: This indicates how much percentage value of the asset is financed by borrower's own equity. The lower LTV, the better it is. This ratio stems from the principle that where the borrowers own contribution of the asset cost is high, the chances of default are lower. To illustrate for a Truck costing Rs. 20 lakh, if the borrower has himself contributed Rs.10 lakh and has taken only Rs. 10 lakh as a loan, he is going to have lesser propensity to default as he would lose an asset worth Rs. 20 lakh if he defaults in repaying an installment. This is as against a borrower who may meet only Rs. 2 lakh out of his own equity for a truck costing Rs. 20 lakh. Between the two scenarios given above, the later would have higher risk of default than the former.
- c) Original maturity of loans and average seasoning of the pool: Original maturity indicates the original repayment period and whether the loan tenors are in line with industry averages and borrower's repayment capacity. Average seasoning indicates whether borrowers have already displayed repayment discipline. To illustrate, in the case of a personal loans, if a pool of assets consist of those who have already repaid 80% of the installments without default, this certainly is a superior asset pool than one where only 10% of installments have been paid. In the former case, the portfolio has already demonstrated that the repayment discipline is far higher.
- d) **Default rate distribution**: This indicates how much % of the pool and overall portfolio of the originator is current, how much is in 0-30 DPD (days past due), 30-60 DPD, 60-90 DPD and so on.

The rationale here is very obvious, as against 0-30 DPD, the 60-90 DPD is certainly a higher risk category.

3. Credit Rating and Adequacy of Credit Enhancement: Unlike in plain vanilla instruments, in securitisation transactions, it is possible to work towards a target credit rating, which could be much higher than the originator's own credit rating. This is possible through a mechanism called "Credit enhancement". The process of "Credit enhancement" is fulfilled by filtering the underlying asset classes and applying selection criteria, which further diminishes the risks inherent for a particular asset class. The purpose of credit enhancement is to ensure timely payment to the investors, if the actual collection from the pool of receivables for a given period is short of the contractual payout on securitisation. Securitisation is normally non-recourse instruments and therefore, the repayment on securitisation would have to come from the underlying assets and the credit enhancement. Therefore the rating criteria centrally focus on the quality of the underlying assets.

The Scheme will predominantly invest in those securitisation issuances which have AA and above rating indicating high level of safety from credit risk point of view at the time of making an investment. However, there is no assurance by the rating agency either that the rating will remain at the same level for any given period of time or that the rating will not be lowered or withdrawn entirely by the rating agency.

- 4. Limited Liquidity & Price Risk: Presently, the secondary market for securitised papers is not very liquid. There is no assurance that a deep secondary market will develop for such securities. This could limit the ability of the investor to resell them. Even if a secondary market develops and sales were to take place, these secondary transactions may be at a discount to the initial issue price due to changes in the interest rate structure.
- 5. Limited Recourse to Originator & Delinquency: Securitised transactions are normally backed by pool of receivables and credit enhancement as stipulated by the rating agency, which differ from issue to issue. The Credit Enhancement stipulated represents a limited loss cover to the Investors. These Certificates represent an undivided beneficial interest in the underlying receivables and there is no obligation of either the Issuer or the seller or the originator, or the parent or any affiliate of the seller, issuer and originator. No financial recourse is available to the Certificate Holders against the Investors" Representative. Delinquencies and credit losses may cause depletion of the amount available under the credit enhancement and thereby the investor payouts may get affected if the amount available in the credit enhancement facility is not enough to cover the shortfall. On persistent default of an obligor to repay his obligation, the servicer may repossess and sell the underlying Asset. However many factors may affect, delay or prevent the repossession of such asset or the length of time required to realize the sale proceeds on such sales. In addition, the price at which such asset may be sold may be lower than the amount due from that Obligor.
- Risks due to possible prepayments: Weighted Tenor / Yield: Asset securitisation is a process
 whereby commercial or consumer credits are packaged and sold in the form of financial
 instruments Full prepayment of underlying loan contract may arise under any of the following
 circumstances;
 - a) Obligor pays the receivable due from him at any time prior to the scheduled maturity date of that receivable; or
 - b) Receivable is required to be repurchased by the seller consequent to its inability to rectify a material misrepresentation with respect to that Receivable; or
 - c) The servicer recognizing a contract as a defaulted contract and hence repossessing the underlying asset and selling the same.
 - d) In the event of prepayments, investors may be exposed to changes in tenor and yield.
- 7. Bankruptcy of the Originator or Seller: If originator becomes subject to bankruptcy proceedings and the court in the bankruptcy proceedings concludes that the sale from originator to trust was not a sale then an Investor could experience losses or delays in the payments due. All possible care is generally taken in structuring the transaction so as to minimize the risk of the sale to Trust not being construed as a 'True Sale'. Legal opinion is normally obtained to the effect that

the assignment of Receivables to Trust in trust for and for the benefit of the Investors, as envisaged herein, would constitute a true sale.

- 8. Bankruptcy of the Investor's Agent: If Investor's agent becomes subject to bankruptcy proceedings and the court in the bankruptcy proceedings concludes that the recourse of Investor's Agent to the assets/receivables is not in its capacity as agent/Trustee but in its personal capacity, then an Investor could experience losses or delays in the payments due under the agreement. All possible care is normally taken in structuring the transaction and drafting the underlying documents so as to provide that the assets/receivables if and when held by Investor's Agent is held as agent and in Trust for the Investors and shall not form part of the personal assets of Investor's Agent. Legal opinion is normally obtained to the effect that the Investors Agent's recourse to assets/ receivables is restricted in its capacity as agent and trustee and not in its personal capacity.
- 9. Risk of co-mingling: The servicers normally deposit all payments received from the obligors into the collection account. However, there could be a time gap between collection by a servicer and depositing the same into the collection account especially considering that some of the collections may be in the form of cash. In this interim period, collections from the loan agreements may not be segregated from other funds of the servicer. If the servicer fails to remit such funds due to Investors, the Investors may be exposed to a potential loss. Due care is normally taken to ensure that the Servicer enjoys highest credit rating on standalone basis to minimize comingling risk.
- 10. Risks relating to tax incidence on securitization Special Purpose Vehicles: In October 2011, the income tax authorities issued a claim on certain securitisation SPVs, stating that the gross income of such SPVs was liable to tax. The matter is presently under sub judice with the Bombay High Court. Several industry participants approached the Ministry of Finance (MoF) to seek clarity and reinforce the "pass through" status of a securitisation SPV. The Finance Bill, 2013, has sought to clarify the tax position by stating that securitisation SPVs are not liable to pay income tax. However, any tax incidence on gross income of SPVs could result in dilution of payouts to investors.

• Risk associated with favourable taxation of equity-oriented Scheme:

In the event that investible funds of more than 65% of the total proceeds in each Scheme are not invested in the equity shares of domestic companies, the tax exemption, if any, on income distribution will not be available to the Unit Holders.

• Risk associated with Stock Lending: Securities Lending and Borrowing ("SLB") is an exchange traded product in India, with trades done on order matching platforms setup by the clearing corporation/house of recognized stock exchanges. In accordance with SEBI guidelines, there is a robust risk management system and safeguards exercised by the clearing corporation/house, which also guarantee financial settlement hence eliminating counterparty risk on borrowers. The Scheme may participate as a lender in the SLB market and lend securities held in the portfolio for earning fees from such lending to enhance revenue of the Scheme. The key risk to the Scheme is creation of temporary illiquidity due to the inability to sell such lent securities, till the time such securities are returned on the contractual settlement date or on exercise of early recall.

• Risks associated with Overseas Investments

Subject to necessary approvals, in terms of all applicable guidelines issued by SEBI and RBI from time to time and within the investment objectives of the Schemes, the Schemes may invest in overseas markets and securities which carry a risk on account of fluctuations in the foreign exchange rates, nature of securities market of the country concerned, repatriation of capital due to exchange controls and political circumstances.

• Risk associated with investments in repo of corporate debt securities

In repo transactions, also known as a repo or sale repurchase agreement, securities are sold with the seller agreeing to buy them back at later date. The repurchase price should be greater than the

original sale price, the difference effectively representing interest. A repo is economically similar to a secured loan, with the buyer receiving corporate debt securities as collateral to protect against default. The Scheme may invest in repo of corporate debt securities which are subject to the following risks:

- i. Counterparty Risk: This refers to the inability of the seller to meet the obligation to buy back securities at the contracted price. The Investment Manager will endeavour to manage counterparty risk by dealing only with counterparties having strong credit profiles assessed through in-house credit analysis or with entities regulated by SEBI/RBI/IRDA.
- ii. Collateral Risk: In the event of default by the repo counterparty, the scheme has recourse to the corporate debt securities. Collateral risk arises when the market value of the securities is inadequate to meet the repo obligations. This risk is mitigated by restricting participation in repo transactions only in AA and above rated money market and corporate debt securities. In addition, appropriate haircuts are applied on the market value of the underlying securities to adjust for the illiquidity and interest rate risk on the underlying instrument.

Risks Associated With Transaction In Units Through Stock Exchange Mechanism

In respect of transactions in Units of the Scheme through NSE and/or BSE or any other recognised stock exchange, allotment and redemption of Units on any Business Day will depend upon the order processing/settlement by NSE, BSE or such other exchange and their respective clearing corporations on which the Fund has no control. Further, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by NSE, BSE or such other recognised exchange in this regard.

• Risks associated with investments in REITs and InvITs

Risk of lower than expected distributions: The distributions by the REIT or InvIT will be based on the net cash flows available for distribution. The amount of cash available for distribution principally depends upon the amount of cash that the REIT/INVIT receives as IDCW or the interest and principal payments from portfolio assets. The cash flows generated by portfolio assets from operations may fluctuate based on, among other things

- a. success and economic viability of tenants and off-takers
- b. economic cycles and risks inherent in the business which may negatively impact valuations, returns and profitability of portfolio assets
- c. force majeure events related such as earthquakes, floods etc. rendering the portfolio assets inoperable
- d. debt service requirements and other liabilities of the portfolio assets
- e. fluctuations in the working capital needs of the portfolio assets
- f. ability of portfolio assets to borrow funds and access capital markets
- g. changes in applicable laws and regulations, which may restrict the payment of IDCW by portfolio assets
- h. amount and timing of capital expenditures on portfolio assets
- i. insurance policies may not provide adequate protection against various risks associated with operations of the REIT/InvIT such as fire, natural disasters, accidents

Price-Risk: The valuation of the REIT/InvIT units may fluctuate based on economic conditions, fluctuations in markets (eg. real estate) in which the REIT/InvIT operates and the resulting impact on the value of the portfolio of assets, regulatory changes, force majeure events etc. REITs & InvITs may have volatile cash flows. As an indirect shareholder of portfolio assets, unit holders rights are subordinated to the rights of creditors, debt holders and other parties specified under Indian law in the event of insolvency or liquidation of any of the portfolio assets

Interest-Rate Risk: Generally, when interest rates rise, prices of units fall and when interest rates drop, such prices increase.

Liquidity Risk: This refers to the ease with which REIT/InvIT units can be sold. There is no assurance that an active secondary market will develop or be maintained. Hence there would be time when

trading in the units could be infrequent. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities for which a liquid market exists.

• Risk Factors Associated with Imperfect Hedging using Interest Rate Futures

- 1. Basis Risk risk associated with divergence in the price movement of the portfolio being hedged and the price movement of the derivative serving as the hedge e.g. a loss (gain) in the market value of bonds in the portfolio (or the part thereof that is being hedged), may be accompanied by a disproportionate gain (loss) in the market value of the derivatives being used to serve as the hedge. This imperfect correlation between the two investments creates the potential for excess gains or losses in a hedging strategy, thus adding risk to the position.
- 2. Mispricing Risk, or improper valuation market circumstances may necessitate unwinding the derivative positions at sub-optimal prices during periods of market dislocation triggered by contagion or tumult e.g. if the expected upward trajectory of yields reverses course and begins to spiral downward, most participants with short Interest Rate Futures positions are likely to seek an unwinding, leading to a potential amplification in the adverse price movement, and impact therefrom.
- 3. Correlation weakening, and consequent risk of regulatory breach SEBI regulation mandates a minimum correlation criteria of 0.9 (calculated on a 90 day basis) between the portfolio being hedged and the derivative serving as the hedge; in cases where this limit is breached (i.e. when the 90-day correlation falls below 0.9), a rebalancing period of 5 working days has been permitted. Inability to satisfy this requirement within the stipulated period due to difficulties in re-balancing would lead to a lapse of the exemption in gross exposure computation. The entire derivative exposure would then need to be included in gross exposure, which may result in gross exposure in excess of 100% of net asset value; leverage is not permitted as per SEBI guidelines.

RISK MANAGEMENT STRATEGIES

DSPAM is committed to a strong control and compliance environment and ensuring that the management structure is appropriate to the scale of the business. DSPAM's fiduciary business is managed according to the rules and a regulation stipulated for Asset Management Companies by the Securities & Exchange Board of India (SEBI) and also incorporates DSPAM's internal policies.

The AMC has systems and processes to monitor all the investment restrictions specified by SEBI and in this document on a regular basis.

• Market Liquidity Risk:

The liquidity risk will be managed and/or sought to be addressed by creating a portfolio which has adequate access to liquidity. The Investment Manager will select securities, which have or are expected to have good secondary market liquidity. There is good secondary market liquidity in large cap stocks. Market Liquidity Risk will be managed actively within the portfolio liquidity limits. The first access to liquidity is through cash and fixed income securities.

• Credit Risk:

Credit Risk associated with Fixed Income securities will be managed by making investments in securities issued by borrowers, which have a very good credit profile. Limits are assigned for each of the issuers (other than government of India); these limits are for the amount as well as maximum permissible tenor for each issuer. The credit process ensures that issuer level review is done at inception as well as periodically by taking into consideration the balance sheet and operating strength of the issuer.

Term Structure of Interest Rates (TSIR) Risk;

The Investment Manager will endeavour to actively manage the duration based on the ensuing market conditions. As the fixed income investments of the Scheme are generally short duration in nature, the risk can be expected to be small.

• Rating Migration Risk:

The endeavour is to invest in high grade/quality securities. The due diligence performed before assigning credit limits should mitigate company-specific issues. The limits are monitored after they have been assigned, on an ongoing basis.

• **Re-investment Risk**: Re-investment Risk is prevalent for fixed income securities, but as the fixed income investments of the Scheme are generally short duration in nature, the impact can be expected to be small.

• Market Risk related to equity and equity related securities

The Investment Manager endeavours to invest in companies, where adequate due diligence and research has been performed by the Investment Manager. As not all these companies are very well researched by third-party research companies, the Investment Manager also relies on its own research. This involves one-to-one meetings with the management of companies, attending conferences and analyst meets and also tele-conferences. The company- wise analysis will focus, amongst others, on the historical and current financial condition of the company, potential value creation/unlocking of value and its impact on earnings growth, capital structure, business prospects, policy environment, strength of management, responsiveness to business conditions, product profile, brand equity, market share, competitive edge, research, technological know- how and transparency in corporate governance.

· Risk associated with floating rate securities:

There is very low liquidity in floating rate securities, resulting in lack of price discovery. Hence, incremental investments in floating rate securities are going to be very limited.

Pharmaceutical and Healthcare Sector Concentration Risk;

The Scheme has primary investment objective to invest in Pharmaceutical and Healthcare sectors. Being a sector fund, it will have higher risk as compared to a diversified equity fund. The Investment Manager will endeavour due diligence in the stock selection. The investors are informed that a pure sector fund will have high volatility. This risk cannot be defeased and is the primary feature of the Scheme.

• Risks associated with Pharmaceutical and Healthcare Companies:

The Investment Manager will focus on companies with strong managements, responsiveness to business conditions, product profile, brand equity, market share, competitive edge, research, technological know-how and transparency in corporate governance besides financial condition of the company, potential value creation/unlocking of value and its impact on earnings growth, capital structure, business prospects and policy environment. The Investment Manager believes the good managements create good and sustainable companies and hence management quality will be a key differentiator.

• Risk associated with favourable taxation of equity-oriented Scheme

This risk is mitigated as there is a regular monitoring of equity exposure of each of the equity oriented Scheme of the Fund.

• Risk associated with Stock Lending

The investment managers will ensure adherence to the limits assigned for stock lending and will ensure that the liquidity Risk is managed actively within the portfolio liquidity limits by maintaining proper asset-liability match to ensure payout of the obligations. Also to ensure that the counterparty risk is limited the AMC will participate in stock lending only through exchange mechanism where the settlement is guaranteed.

Risk associated with investments in repo of corporate debt securities

The Investment Manager will endeavour to manage counterparty risk in corporate debt repos by dealing only with counterparties having strong credit profiles. These could include SEBI regulated mutual funds, RBI regulated Banks, Non-Banking Finance Companies, Primary Dealers and IRDA regulated Insurance companies. Corporates for whom credit limits have been assigned are eligible counterparties. These corporates should have a minimum investment grade credit rating. For new counterparties, approval from Head - Risk will be taken and an assessment will be done by the Quantitative Investment & Analytics team.

The collateral risk is mitigated by restricting participation in repo transactions only in AA and above rated money market and corporate debt securities, where potential for downgrade/ default is low. In addition, appropriate haircuts are applied on the market value of the underlying securities to adjust for the illiquidity and interest rate risk on the underlying instrument.

· Risk associated with trading in derivatives

The Scheme can use equity derivatives, both for directional (including equitisation of cash) and yield enhancement strategies. The credit risk associated with equity derivatives is defeased as only exchange traded equity derivatives are permitted. On the performance, portfolio and regulatory limits, there is an established daily monitoring process. As limits could be breached because of changes in the open interest, which is a function of market-wide activity and not specific to the Scheme and are not in control, there are hard and soft limits. Any breach beyond the soft limit is immediately rectified and brought within the specified limit.

The guidelines issued by SEBI / RBI from time to time for forward rate agreements and interest rate swaps and other derivative products would be adhered to.

• Risks Associated With Overseas Investments

The portfolio is predominantly in INR denominated securities. Should there be investments in ADRs/GDRs of Indian companies or foreign securities, the investment process of the fund manager will ensure that a comprehensive company specific due diligence is performed.

· Risks associated with investments in REITs and InvITs

The Investment Manager endeavours to invest in REITS/InvITs, where adequate due diligence and research has been performed by the Investment Manager. The Investment Manager also relies on its own research as well as third party research. This involves one-to-one meetings with the managements, attending conferences and analyst meets and also tele-conferences. The analysis will focus, amongst others, on the predictability and strength of cash flows, value of assets, capital structure, business prospects, policy environment, strength of management, responsiveness to business conditions, etc.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. However, if such limit is breached during the NFO of the Scheme, the Mutual Fund will endeavor to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day

of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

C. SPECIAL CONSIDERATIONS

- Subject to the SEBI (MF) Regulations, funds managed by the associates of the Sponsors may invest either directly or indirectly in the Scheme and may acquire a substantial portion of the Scheme Units and collectively constitute a majority investor in the Scheme. Investment in domestic Securitized Debt:

Depending upon the Investment Manager's views, the Scheme may invest in domestic securitized debt such as ABS or MBS. The investments in domestic securitized debt will be made only after giving due consideration to factors such as but not limited to the securitization structure, quality of underlying receivables, credentials of the servicing agent, level of credit enhancement, liquidity factor, returns provided by the securitized paper vis-a-vis other comparable investment alternatives.

Although the returns provided by securitized debt could be higher, one must not lose sight of the fact that risks also exist with regard to investments in securitized debt. Investments in pass-through certificates of a securitization transaction represent an undivided beneficial interest in the underlying receivables and do not represent an obligation of either the issuer or the seller, or the parent of the seller, or any affiliate of the seller or the issuer or the trustee in its personal capacity, save to the extent of credit enhancement to be provided by the credit enhancer. The trust's principal asset will be the pool of underlying receivables. The ability of the trust to meet its obligations will be dependent on the receipt and transfer to the designated account of collections made by the servicing agent from the pool, the amount available in the cash collateral account, and any other amounts received by the trust pursuant to the terms of the transaction documents. However, the credit enhancement stipulated in a securitization transaction represents a limited loss cover only. Delinquencies and credit losses may cause depletion of the amount available under the cash collateral account and thereby the scheduled payouts to the investors may get affected if the amount available in the cash collateral account is not enough to cover the shortfall.

Further Unit holders are requested to refer below the disclosure relating to investments in securitized debt, in the SEBI prescribed format:

(i) How the risk profile of securitized debt fits into the risk appetite of the Scheme:

The Scheme seeks to generate an attractive return, consistent with prudent risk, from a portfolio which is substantially constituted of quality debt securities. The Scheme also seeks to generate capital appreciation by investing a smaller portion of its corpus in equity and equity related securities of issuers domiciled in India.

In line with the investment objective, securitised debt instruments having a high credit quality commensurate with other debt instruments in the portfolio will be considered for investment.

(ii) Policy relating to originators based on nature of originator, track record, NPAs, losses in earlier securitized debt, etc

The parameters used to evaluate originators are

- Track record
- Willingness to pay, through credit enhancement facilities etc.
- Ability to pay
- Business risk assessment, wherein following factors are considered:
 - Outlook for the economy (domestic and global)
 - Outlook for the industry
 - Company specific factors

In addition, a detailed review and assessment of rating rationale is done including interactions with the originator as well as rating agency.

Critical Evaluation Parameters (for pool loan) regarding the originator / underlying issuer:

- Default track record/ frequent alteration of redemption conditions / covenants
- High leverage ratios of the ultimate borrower both on a standalone basis as well on a consolidated level/ group level
- Higher proportion of re-schedulement of underlying assets of the pool or loan, as the case may be
- Higher proportion of overdue assets of the pool or the underlying loan, as the case may be
- Poor reputation in market
- Insufficient track record of servicing of the pool or the loan, as the case may be.

(iii) Risk mitigation strategies for investments with each kind of originator

Analysis of originator: Dedicated credit research analysts, analyses and evaluates each originator and sets up limits specifying both the maximum quantum and maximum tenor for investments and investments are considered only within these limits.

Originator analysis typically encompasses:

- Size and reach of the originator
- Collection process, infrastructure and follow-up mechanism
- Quality of MIS
- Credit enhancement for different type of originator

(iv) The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments

Eligible assets: Only assets with an established track record of low delinquencies and high credit quality over several business cycles will be considered for investment.

Analysis of pool: Characteristics such as average pool maturity (in months), average loan to value ratio, average seasoning of the pool, maximum single exposure, geographical distribution and average single exposure are studied to determine pool quality

Risk mitigating measures: Credit enhancement facilities (including cash, guarantees, excess interest spread, subordinate tranches), liquidity facilities and payment structure are studied in relation to historical collection and default behavior of the asset class to ensure adequacy of credit enhancement in a stress scenario.

(v) Minimum retention period of the debt by originator prior to securitization

We will follow the guidelines on minimum holding period requirements as laid down by SEBI and RBI from time to time.

(vi) Minimum retention percentage by originator of debts to be securitized

We will follow the guidelines on minimum holding period requirements as laid down by SEBI and RBI from time to time.

(vii) The mechanism to tackle conflict of interest when the Mutual Fund invests in securitized debt of an originator and the originator in turn makes investments in that particular Scheme of the Fund

The AMC has an independent RQA team which is distinct from the Sales function and the Investments function and has a separate reporting and appraisal structure designed to avoid conflict of interest. Investments can be initiated by the fund managers only after the RQA team has assigned limits for the originator. The originator wise limits specify both the maximum quantum and maximum tenor for investments.

(viii) The resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt

The AMC has a rigorous risk management process for all fixed income investments, which also encompasses securitized debt. Dedicated credit research analysts are responsible for monitoring risks including credit and liquidity risk. The functions of the team include:

Detailed credit analysis of issuers: based on the management evaluation, operating strength and financial strength to determine suitability for investment. Periodic reviews on a quarterly/annual basis are under taken for eligible issuers. Ratings are monitored on a daily basis and any changes are immediately recorded and suitable action taken.

For securitized pool loan exposures, the analysis includes pool seasoning, pool asset quality, diversification, collateral margin, originator analysis and credit enhancement mechanisms. Pool performance statistics published by rating agencies are analyzed for performance of other securitised pools of the same originator as well as for the performance of the asset class as a whole. Regular interactions with the rating agencies are done to discuss performance trends. Documents are vetted by the legal and compliance team. In addition, monthly payout reports from the trustees are analysed for collection performance and adequacy of cash collateral.

The Scheme will not be investing in foreign securitised debt.

• Investment in Overseas Financial Assets/Foreign Securities

According to clause No. 12.19 of the SEBI Master Circular mutual funds can invest in ADRs/GDRs/other specified foreign securities and, such investments are subject to an overall limit of US\$ 7 bn. for all mutual funds put together. The Mutual Fund has been allowed an individual limit of US\$ 1 bn. The

overall ceiling for investment in overseas ETFs that invest in securities is US\$ 1 billion subject to a maximum of US\$ 300 million per mutual fund.

The dedicated fund manager appointed for making overseas investments by the Mutual Fund will be in accordance with the applicable requirements of SEBI.

Further, SEBI vide its letter no. SEBI/HO/OW/IMD-II/DOF3/P /25095/2022 dated June 17, 2022 had advised AMFI that Mutual Fund schemes may resume subscriptions and make investments in overseas funds/securities upto the headroom available, without breaching the overseas investment limits as of end of day of February 01, 2022 at Mutual Fund level.

E. WHAT ARE THE INVESTMENT STRATEGIES?

Strategy for Equity Securities

The Investment Manager prefers adopting a top-down approach with regard to investment in equity and equity related securities. This approach encompasses an evaluation of key economic trends and a diligent study of various investment opportunities within the specified sectors in each Scheme. In picking out individual investment opportunities for the portfolio, the Investment Manager will seek both value and growth. Value is discerned when the Investment Manager believes that the inherent worth or long-term growth potential of a company is not fully reflected in the share price of the company. Growth stocks, as the term suggests, are those stocks that are currently in the growth phase. Such growth in earnings could be due to a new product, a new process, growing market share, stronger brand equity, technological breakthrough and unique or predominant position in a market, among other factors.

The Investment Manager will conduct in-house research in order to identify value and growth stocks. The analysis will focus, among other things, on the historical and current financial condition of the company, capital structure, business prospects, strength of management, responsiveness to business conditions, product profile, brand equity, market share, competitive edge, research and technological know-how and transparency in corporate governance. The quality or strength or management would be a key focus area.

• Strategies for trading in equity derivatives

The Mutual Fund may use the following strategies while trading in derivatives for the purpose of efficient portfolio management:

1. Reverse Arbitrage:

This strategy will be adopted if the cash price of a stock (say "XYZ") is reasonably greater than single stock futures of XYZ, and then the Investment Manager may sell cash position in XYZ and buy single stock futures of XYZ. In this case the Investment Manager will still be having a long-term view on the stock XYZ but is able to minimize the cost of holding of XYZ.

2. Arbitrage:

This strategy will be adopted if the single stock future of XYZ is reasonably greater than the cash price of XYZ, then the Investment Manager will buy the shares of XYZ in the cash market and sell equivalent numbers of single stock futures of XYZ. In this case the Investment Manager may not have an investment view of the stock XYZ but would like to enhance the portfolio value.

3. Portfolio Hedging:

This strategy will be adopted:

- a. If in an already invested portfolio of a Scheme, the Investment Manager is expecting a market correction, the Investment Manager may sell Index Futures to insulate the portfolio from the market related risks.
- b. If there are significant inflows to the Scheme and the market expectations are bullish, the Investment Manager may buy Index Futures to continue participation in the equity markets. This strategy is used to reduce the time to achieve the desired invested levels.

Strategy for Fixed Income Securities

Fixed Income research by the Investment Manager will emphasise credit analysis, in order to determine credit risk. Credit analysis will focus on the issuer's historical and current financial condition, current and anticipated cash flow and borrowing requirements, value of assets in relation to historical cost, strength of management, responsiveness to business conditions, credit standing, future business prospects as well as current and anticipated operating results, among other things. The Investment Manager will also analyse various economic trends in seeking to determine the likely future course of interest rates. The Investment Manager will invest only in those debt securities that are rated investment grade by a domestic credit rating agency such as CRISIL, ICRA, CARE etc. or in unrated debt securities, which the Investment Manager believes to be of equivalent quality. Where investment in unrated debt securities is sought to be made, specific approval of the Committee/Board of Directors of the AMC and the Trustee shall be obtained prior to investment.

Representative Index

DSPHF, a sector specific Scheme, shall focus on investing in pharmaceutical, healthcare and associated companies as mentioned earlier, keeping 'S&P BSE Healthcare Index' (the Index) as the representative index. The Scheme shall have the flexibility to invest in stocks that are outside the composition of the Index but are within the investment focus of the Scheme. The Scheme may broadly follow the composition of the Index without necessarily tracking it. In accordance with clause 12.5.1 of SEBI Master Circular, the Scheme being a sector specific Scheme, the upper ceiling on equity investments in a company by the Scheme shall be the weightage of the company in the representative sectoral index i.e., the Index as disclosed above or 10% of the NAV of the Scheme, whichever is higher.

The Trustees reserves the right to change the Index, if any other appropriate/suitable index is available at a future date, in accordance with SEBI (MF) Regulations.

The composition of the Index as on as on September 29, 2023 is given below for reference. Investors are requested to note that the composition and weightage of the scrips in the index may be modified by The Stock Exchange, Mumbai, from time to time.

Portfolio Turnover

Portfolio turnover is defined as the lower of the aggregate value of purchases or sales as a percentage of the corpus of a scheme during a specified period of time. This will exclude purchases and sales of money market securities. The Scheme is open ended, with subscriptions and redemptions expected on a daily basis, resulting in net inflow/outflow of funds, and on account of the various factors that affect portfolio turnover; it is difficult to give an estimate, with any reasonable amount of accuracy. Therefore, the Scheme has no specific target relating to portfolio turnover.

Overview of Debt Market in India

The Indian bond market comprises mainly of Government securities; State Development Loans (SDL), bonds issued by Public Sector Undertakings (PSU), Development Financial Institutions (DFI) and

Infrastructure-related agencies; debentures and money market instruments issued by corporate sectors and banks. The Government of India routinely issues Government securities and Treasury bills for liquidity and fiscal management. While the Government issues Treasury bills for 91 days, 182 days and 364 days in a discounted form, coupon-bearing Government securities are issued for maturity ranging from 1 year to as high as 50 years. Both Treasury bills and coupon-bearing securities are auctioned by the RBI on behalf of the Government of India. The Indian bond market has also witnessed issuance of bonds from Government-sponsored institutions, DFIs, and infrastructure-related agencies. These bonds are rated by credit rating agencies like CRISIL, ICRA, CARE and India Ratings. They are widely held by market participants because of their liquidity and reduced risk perception due to the government stake in some of them.

The Indian corporate sector has also been frequently raising capital through issuance of non-convertible debentures and commercial papers. These debentures/commercial Papers are mostly rated by rating agencies like CRISIL, ICRA, CARE and India Ratings. There is an active and vibrant secondary market for these debentures/commercial Papers. These normally trade at a marginally higher yield than bonds issued by PSU and other government-sponsored agencies.

Overview of Money Market in India

Money market instruments includes commercial papers, commercial bills, treasury bills, Government securities having an unexpired maturity up to one year, call or notice money, certificate of deposit, usance bills, and any other like instruments as specified by the Reserve Bank of India from time to time. Money market assets are liquid and actively traded segment of fixed income markets. Treasury bills are issued by the Government of India through regular weekly auctions, while Cash Management Bills are issued on an ad-hoc basis. They are mostly subscribed by banks, state governments, mutual funds and other entities. As on 22 Sep 2023, total outstanding treasury bills are Rs. 9,32,379 crore*.

Certificate of Deposits are issued by scheduled banks for their short-term funding needs. They are normally available for up to 365 days tenor. Certificate of deposits issued by public sector banks are normally rated A1+ (highest short-term rating) by various rating agencies. As on 22 Sep 2023, outstanding Certificate of Deposits are Rs. 2,91,830 crore*. Certificate of deposits currently trade at a spread of around 45 basis points** over comparable treasury bills as on 29 Sep 2023, for a one-year tenor.

Commercial Papers are issued by corporate entities for their short-term cash requirements. Commercial Papers are normally rated A1+ (highest short-term rating). As on 15 Sep 2023, total outstanding Commercial Papers are Rs. 4,32,569 crore*. Commercial papers trade at around 75 basis points** over comparable treasury bills as on 29 Sep 2023, for a one-year tenor.

Call Money, TREPS and CROMS are mainly used by the borrowers to borrow a large sum of money on an over-night basis. While Call Money is an unsecured mode of borrowing, TREPS and CROMS are secured borrowing backed by collaterals approved by the Clearing Corporation of India.

Trading in Derivatives

The Mutual Fund may use various derivatives and hedging products/ techniques, in order to seek to generate better returns for the Scheme. Derivatives are financial contracts of pre-determined fixed duration, whose values are derived from the value of an underlying primary financial instrument, commodity or index. The Scheme while investing in equities shall transact in exchange traded equity derivatives only and these instruments may take the form of Index Futures, Index Options, Futures and Options on individual equities/securities and such other derivative instruments as may be appropriate and permitted under the SEBI Regulations and guidelines from time to time.

Advantages of Trading in Derivatives

Advantages of derivatives are many. The use of derivatives provides flexibility to the Schemes to hedge whole or part of the portfolio. The following section describes some of the more common derivatives transactions along with their benefits:

Derivatives are financial contracts of pre-determined fixed duration, whose values are derived from the value of an underlying primary financial instrument, commodity or index, such as interest rates, exchange rates, commodities and equities.

1. Futures

A futures contract is a standardized contract between two parties where one of the parties commits to sell, and the other to buy, a stipulated quantity of a security at an agreed price on or before a given date in future.

Currently, futures contracts have a maximum expiration cycle of 3 months. Three contracts are available for trading, with 1 month, 2 months and 3 months expiry respectively. A new contract is introduced on the next trading day following the expiry of the relevant monthly contract. Futures contracts typically expire on the last Thursday of the month. For example a contract with the March 2021 expiration expires on the last Thursday of March 2021 (March 25, 2021).

Basic Structure of an Index Future

The Stock Index futures are instruments designed to give exposure to the equity markets indices. The Stock Exchange, Mumbai (BSE) and The National Stock Exchange (NSE) have trading in index futures of 1, 2 and 3 month maturities. The pricing of an index future is the function of the underlying index and short-term interest rates. Index futures are cash settled, there is no delivery of the underlying stocks.

Example using hypothetical figures:

1 month ABC Index Future

If the Scheme buys 2,000 futures contracts, each contract value is 50 times the futures index price.

Purchase Date :March 01, 2021 Spot Index :11,200.00 Future Price :11,300.00 Date of Expiry : March 25, 2021

Margin :10%

Assuming the exchange imposes a total margin of 10%, the Investment Manager will be required to provide a total margin of approx. Rs. 113,000,000 (i.e. 10%*11,300*2000*50) through eligible securities and cash.

Assuming on the date of expiry, i.e. March 25, 2021, ABC Index closes at 11,350, the net impact will be a profit of Rs. 5,000,000 for the Scheme, i.e. (11,350-11,300) * 2000 * 50 (Futures price = Closing spot price = Rs. 11,350.00)

Profits for the Scheme = (11,350-11,300) * 2000*50 = Rs. 5,000,000.

Please note that the above example is given for illustration purposes only. Some assumptions have been made for the sake of simplicity.

The net impact for the Scheme will be in terms of the difference of the closing price of the index and cost price. Thus, it is clear from the above example that the profit or loss for the Scheme will be the difference between the closing price (which can be higher or lower than the purchase price) and the purchase price. The risks associated with index futures are similar to those associated with equity investments. Additional risks could be on account of illiquidity and potential mis-pricing of the futures.

Basic Structure of a Stock Future

A futures contract on a stock gives its owner the right and obligation to buy or sell stocks. Single Stock Futures traded on NSE (National Stock Exchange) are cash settled; there is no delivery of the underlying stocks on the expiration date. A purchase or sale of futures on a security gives the trader essentially the same price exposure as a purchase or sale of the security itself. In this regard, trading stock futures is no different from trading the security itself.

Example using hypothetical figures:

The Scheme holds shares of XYZ Limited, the current price of which is Rs. 500 per share. The Scheme sells one month futures on the shares of XYZ Limited at the rate of Rs. 540.

If the price of the stock falls, the Mutual Fund will suffer losses on the stock position held. However, in such a scenario, there will be a profit on the short futures position.

At the end of the period, the price of the stock falls to Rs. 450 and this fall in the price of the stock results in a fall in the price of futures to Rs. 470. There will be a loss of Rs. 50 per share (Rs. 500 - Rs. 450) on the holding of the stock, which will be offset by the profits of Rs. 70 (Rs. 540 - Rs. 470) made on the short futures position.

Please note that the above example is given for illustration purposes only. Some assumptions have been made for the sake of simplicity. Certain factors like margins and other related costs have been ignored. The risks associated with stock futures are similar to those associated with equity investments. Additional risks could be on account of illiquidity and potential mis-pricing of the futures.

2. Options

An option gives a person the right but not an obligation to buy or sell something. An option is a contract between two parties wherein the buyer receives a privilege for which he pays a fee (premium) and the seller accepts an obligation for which he receives a fee. The premium is the price negotiated and set when the option is bought or sold. A person who buys an option is said to be long in the option. A person who sells (or writes) an option is said to be short in the option.

An option contract may be of two kinds:

1) Call option

An option that provides the buyer the right to buy is a call option. The buyer of the call option can call upon the seller of the option and buy from him the underlying asset at the agreed price. The seller of the option has to fulfill the obligation upon exercise of the option.

2) Put option

The right to sell is called a put option. Here, the buyer of the option can exercise his right to sell the underlying asset to the seller of the option at the agreed price.

Option contracts are classified into two styles:

- (a) European Style
 - In a European option, the holder of the option can only exercise his right on the date of expiration only.
- (b) American Style

In an American option, the holder can exercise his right anytime between the purchase date and the expiration date.

Basic Structure of an Equity Option

In India, options contracts on indices are European style and cash settled whereas, option contracts on individual securities are American style and cash settled.

Example using hypothetical figures:

Market type : N Instrument Type : OPTSTK

Underlying : XYZ Limited (XYZ)
Purchase date : March 1, 2021
Expiry date : March 25, 2021

Option Type : Put Option (Purchased)

 Strike Price
 : Rs. 9,750.00

 Spot Price
 : Rs. 9,800.00

 Premium
 : Rs. 200.00

 Lot Size
 : 100

No. of Contracts : 50

Say, the Mutual Fund purchases on March 1, 2021, 1 month Put Options on XYZ Limited (XYZ) on the NSE i.e. put options on 5000 shares (50 contracts of 100 shares each) of XYZ.

As these are American style options, they can be exercised on or before the exercise date i.e. March 25, 2021. If the share price of Limited falls to Rs. 9,500/- on March 25, 2021, and the Investment Manager decides to exercise the option, the net impact will be as Follows:

Premium Expense = Rs. 200 * 50 * 100 =

Rs. 10,00,000/-

Option Exercised at = Rs. 9,500/-

Profits for the Mutual Fund = (9,750.00 - 9,500.00) * 50 * 100

= Rs. 12,50,000/-

Net Profit = Rs. 12,50,000 - Rs. 10,00,000 = Rs. 2,50,000/-

In the above example, the Investment Manager hedged the market risk on 5000 shares of XYZ Limited by purchasing put options.

Please note that the above example is given for illustration purposes only. Some assumptions have been made for the sake of simplicity. Certain factors like margins have been ignored. The purchase of Put Options does not increase the market risk in the Mutual Fund as the risk is already in the Mutual Fund's portfolio on account of the underlying asset position (in his example shares of XYZ Limited). The Premium paid for the option is treated as an expense and added to the holding cost of the relevant security. Additional risks could be on account of illiquidity and potential mis-pricing of the options.

Exposure to Equity Derivatives

i. Position limit for the Mutual Fund in index options contracts:

- a. The Mutual Fund position limit in all index options contracts on a particular underlying index shall be Rs. 500 crore or 15% of the total open interest in the market in index options, whichever is higher, per Stock Exchange.
- b. This limit would be applicable on open positions in all options contracts on a particular underlying index.

ii. Position limit for the Mutual Fund in index futures contracts:

- a. The Mutual Fund position limit in all index futures contracts on a particular underlying index shall be Rs. 500 crore or 15% of the total open interest in the market in index futures, whichever is higher, per Stock Exchange.
- b. This limit would be applicable on open positions in all futures contracts on a particular underlying index.

iii. Additional position limit for hedging:

In addition to the position limits at point (i) and (ii) above, Fund may take exposure in equity index derivatives subject to the following limits:

- a. Short positions in index derivatives (short futures, short calls and long puts) shall not exceed (in notional value) the Mutual Fund's holding of stocks.
- b. Long positions in index derivatives (long futures, long calls and short puts) shall not exceed (in notional value) the Mutual Fund's holding of cash, government securities, T-Bills and similar instruments.

iv. Position limit for the Mutual Fund for stock based derivative contracts:

The combined futures and options position limit shall be 20% of the applicable Market Wide Position Limit (MWPL).

v. Position limit for the Scheme:

The position limits for the Scheme and disclosure requirements are as follows:

- a. For stock option and stock futures contracts, the gross open position across all derivative contracts on a particular underlying stock of a scheme of a Fund shall not exceed the higher of 1% of free float market capitalization (in terms of number of shares).
 Or
 - 5% of the open interest in the derivative contracts on a particular underlying stock (in terms of number of contracts).
- b. This position limit shall be applicable on the combined position in all derivative contracts on a underlying stock at a Stock Exchange.
- c. For index based contracts, the Mutual Fund shall disclose the total open interest held by its scheme or all schemes put together in a particular underlying index, if such open interest equals to or exceeds 15% of the open interest of all derivative contracts on that underlying index.

As and when SEBI notifies amended limits in position limits for exchange traded derivative contracts in future, the aforesaid position limits, to the extent relevant, shall be read as if they were substituted with the SEBI amended limits.

Exposure Limits:

With respect to investments made in derivative instruments, the Scheme shall comply with the following exposure limits in line with clause 12.24.1 and clause 12.25 of the SEBI Master Circular:

- 1. The cumulative gross exposure through equity, debt, derivative positions (including commodity and fixed income derivatives), repo transactions and credit default swaps in corporate debt securities, Real Estate Investment Trusts (REITs), Infrastructure Investment Trusts (InvITs), other permitted securities/assets and such other securities/assets as may be permitted by SEBI from time to time should not exceed 100% of the net assets of the scheme. However, the following shall not be considered while calculating the gross exposure:
- i. Security-wise hedged position and
 - ii. Exposure in cash or cash equivalents with residual maturity of less than 91 days
- 2. The total exposure related to option premium must not exceed 20% of the net assets of the Scheme.
- 3. The Mutual Fund shall not write options or purchase instruments with embedded written options.
- 4. Exposure due to hedging positions may not be included in the above mentioned limits subject to the following:
 - a. Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
 - b. Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point 1.
 - c. Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
 - d. The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
- 5. (a) Mutual Funds may enter into plain vanilla Interest Rate Swaps (IRS) for hedging purposes. The value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme.
 - (b) In case of participation in IRS is through over the counter transactions, the counter party has to be an entity recognized as a market maker by RBI and exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme. However, if mutual funds are transacting in IRS through an electronic trading platform offered by the Clearing Corporation of India Ltd. (CCIL) and CCIL is the central counterparty for such transactions guaranteeing settlement, the single counterparty limit of 10% shall not be applicable.
- 6. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point 1.
- 7. Definition of Exposure in case of Derivative Positions:
 Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option Bought	Option Premium Paid * Lot Size * Number of Contracts

3. Interest Rate Swap (IRS)

Any swap is effectively an exchange of one set of cash-flows for another considered to be of equal value. If the exchange of cash flows is linked to interest rates, it becomes an interest rate swap.

An interest rate swap is an agreement between two parties to exchange future payment streams based on a notional amount. Only the interest on the notional amount is swapped, and the principal amount is never exchanged.

In a typical interest rate swap, one party agrees to pay a fixed rate over the term of the agreement and to receive a variable or floating rate of interest. The counterparty receives a stream of fixed rate payments at regular intervals as described in the agreement and pays the floating rate of interest. A fixed/ floating interest rate swap is characterized by:

- 1. Fixed interest rate:
- 2. Variable or floating interest rate, which is periodically reset;
- 3. Notional principal amount upon which total interest payments are based; and
- 4. The terms of the agreement, including a schedule of interest rate reset dates, payment dates and termination date.

The primary reason for engaging in an interest rate swap is to hedge the interest rate exposure. An illustration could be an institution having long-term fixed rate assets (longer tenor securities receiving fixed rate) in a rising interest rate environment; it can hedge the interest rate exposure by purchasing an interest rate swap where the institution receives floating interest rate and pays fixed rate. In this case, an interest rate swap is likely to reduce the duration and interest rate volatility of the fund.

Example:

Terms:

Fixed Interest Rate: 8.50% p.a.

Variable Interest Rate : NSE Over-Night MIBOR reset daily and compounded daily

Notional Principal Amount : Rs.100 Crore

Period of Agreement: 1 year Payment Frequency: Semi-annual

Now, suppose the six-month period from the effective date of the swap to the first payment date comprises 182 days and the daily compounded NSE Over-Night MIBOR is 8.15% p.a. on the first payment date, then the fixed and variable rate payment on the first payment date would be as follows:

Fixed rate payment:

Rs. $4,23,83,562 = (Rs.100,00,00,000) \times (8.50\%) \times (182 Days / 365 Days)$

Variable rate payment:

Rs. $4,06,38,356 = (Rs.100,00,00,000) \times (8.15\%) \times (182 Days / 365 Days)$

Often, a swap agreement will call for only the exchange of net amount between the counterparties. In the above example, the fixed-rate payer will pay the variable-rate payer a net amount of Rs. 17,45,205 = Rs. 4,23,83,562 - Rs. 4,06,38,356.

The second and final payment will depend on the daily NSE MIBOR compounded daily for the remaining 183 days. The fixed rate payment will also change to reflect the change in holding period from 182 days to 183 days.

4. Forward Rate Agreement (FRA)

An FRA is an off balance sheet agreement to pay or receive on an agreed future date, the difference between an agreed interest rate and the interest rate actually prevailing on that future date, calculated on an agreed notional principal amount. It is settled against the actual interest rate prevailing at the beginning of the period to which it relates rather than paid as a gross amount.

An FRA is referred to by the beginning and end dates of the period covered. Thus a 5x8 FRA is one that covers a 3-month period beginning in 5-months and ending in 8-months. FRAs are purchased to hedge the interest rate risk; an investor facing uncertainty of the interest rate movements can fix the interest costs by purchasing an FRA.

An illustration could be a corporation having floating rate debt linked to an index such as say, 3-Month MIBOR. If the existing interest cost is at 8% on Rs.100 Crore for the next three months, the corporation can purchase a 3x6 FRA @ 8.1% on Rs.100 Crore and fix the interest cost for the 3-6 months period. If the actual 3-Month MIBOR after 3-months is at 8.25%, the corporation has saved 15 bps in interest cost. As the settlement is done at the beginning of the period, the savings in interest expense are discounted to a present value using a 3-month rate to calculate the actual settlement amount.

The flows for the institution will be, as follows:

Interest Savings = Rs. 100 Crore * 15 bps * 92/365

(assuming 92 days in the 3 month FRA period

and 365 days in the conventional year)

= Rs.3,78,082.19

Settlement Amount = Rs.3,78,082.19/ (1+8.25%*92/365)

Please note that the above examples are hypothetical in nature and the figures are assumed.

5. Interest Rate Futures

An Interest Rate Futures ('IRF') contract is "an agreement to buy or sell a debt instrument at a specified future date at a price that is fixed today." The underlying security for Interest Rate Futures is either Government Bond or T-Bill. Interest Rate Futures are Exchange traded and standardized contracts based on 6 year, 10 year and 13 year Government of India Security and 91-day Government of India Treasury Bill (91DTB). These future contracts are cash settled. These instruments can be used for hedging the underlying cash positions.

The overall gross exposure for a fund is computed as sum of exposure to equity, cash, debt instruments and derivatives (other than for hedging purposes) and it should not be more than 100%. Derivative position is considered to be for hedging purposes only if the following conditions are met:

- · Perfect Hedging We hedge the underlying using IRF contract of same underlying
- Imperfect hedging the Underlying being hedged and the IRF contract has a 90 day correlation of closing prices of more than 90%. In case of correlation breaking at any time the derivative position would be counted as an exposure. SEBI allows maximum of 20% imperfect hedging.

For example, assume a portfolio comprising the following structure:

Security	Amount (crs)	Price (Rs)	
IGB 6.79% 2027	100	100.40	
IGB 6.79% 2029	50	98.35	
IGB 7.72% 2025	25	104.55	
Cash	25		
Total	200		

Assuming the fund manager intends to hedge the portfolio using IRF and uses contracts on IGB 6.79% 2027 as it is most liquid.

Maximum imperfect hedging allowed, based on SEBI limit of 20% for the above fund is 200*20% = 40 crs

Maximum perfect hedging using 6.79% 2027 is 100 crs (as amount of 6.79% 2027 in the fund is 100 crs)

Total hedge the fund can do = 100 crs + 40 crs = 140 crs

Assuming the 90 day historical correlation between the instruments in the portfolio are as follows

90 day historical correlation	IGB 6.79% 2027	IGB 6.79% 2029	IGB 7.72% 2025
IGB 6.79% 2027	1	0.95	0.80
IGB 6.79% 2029	0.95	1	0.75
IGB 7.72% 2025	0.80	0.75	1

Given that we are using IRF on 6.79% 2027, we can hedge 6.79% 2029 using IRFs as correlation is more than 90% upto 40 crs (based on the 20% limit of imperfect hedging).

Since one contract of IRF has a notional of Rs. 2 lakhs, in this example the fund manager sells Rs. 140 crores/2 lakhs = 7000 contracts, to hedge his position.

Hence after hedging the fund is as shown below:

Security	Amount (crs)	Price (Rs)	Comments
IGB 6.79% 2027	100	100.40	100% hedged - Perfect hedging
IGB 6.79% 2029	50	98.35	40% hedged - Imperfect hedging
IGB 7.72% 2025	25	104.55	Unhedged
Cash	25		Unhedged
IRF 6.79% 2027	140	100.35	
Total	200		

At maturity of the Interest Rate Futures

Case 1: bonds close higher than at the time the hedge was entered into

Security	Amount (crs)	Price before hedging(Rs)	Price on maturity of hedge (Rs)	Gain	Net Gain (lakhs)
IGB 6.79% 2027	100	100.4	100.5	0.1	10.00
IGB 6.79% 2029	50	98.35	98.5	0.15	7.50
IGB 7.72% 2025	25	104.55	104.6	0.05	1.25
Cash	25				-
Without IRF					18.75
IRF 6.79% 2027	140	100.35	100.5	-0.15	(21.00)
Total With IRF	200				(2.25)

Case 2: bonds close lower than at the time the hedge was entered into

Security	Amount (crs)	Price before hedging	Price on maturity of hedge (Rs)	Gain	Net (lakhs)	Gain
IGB 6.79% 2027	100	100.4	100.3	-0.1	(10.00)	
IGB 6.79% 2029	50	98.35	98.23	-0.12	(6.00)	
IGB 7.72% 2025	25	104.55	104.5	-0.05	(1.25)	

Cash	25				-
Without IRF					(17.25)
IRF 6.79% 2027	140	100.35	100.3	0.05	7.00
Total with IRF	200				(10.25)

As can be seen in the cases above, in case yields move higher, IRFs help in reducing the loss to the fund.

1. (i) The Schemes shall not invest more than 10% of its NAV in debt instruments comprising money market instruments and non-money market instruments issued by a single issuer which are rated not below investment grade by a credit rating agency authorized to carry out such activity under the SEBI Act 1992. Such investment limit may be extended to 12% of the NAV of the scheme with the prior approval of the Board of Trustees and the Board of AMC.

In accordance with clause 12.8.3 of SEBI Master Circular, following are the norms for credit rating based single issuer limit for actively managed mutual fund schemes.

In case the Units are standing in the names of more than one Unit Holder, where mode of holding is specified as 'Joint', redemption requests will have to be signed by all joint holders. However, in cases of holding specified as 'Anyone or Survivor', any one of the Units Holders will have the power to make redemption requests, without it being necessary for all the Unit Holders to sign. The redemption cheque will be issued in favour of the sole/first Unit Holder's registered name and bank account number, if provided, and will be sent to the registered address of the sole/first Holder as registered with the Registrar. The redemption cheque/demand draft will be payable at par at all the places where the official points of acceptance of transaction are located. Effect of Redemption

On redemption, the unit capital and reserves will stand reduced by an amount equivalent to the product of the number of Units redeemed and the Redemption Price as on the date of redemption. Units once redeemed will be extinguished and will not be re-issued.

Fractional Units

Since a request for purchase is generally made in Rupee amounts and not in terms of number of Units of the Scheme, a Unit Holder may be left with fractional Units. Fractional Units will be computed and accounted for up to three decimal places. However, fractional Units will, in no way, affect the Unit Holder's ability to redeem the Units, either in part or in full, standing to his/her/its credit.

Redemption by investors transacting through the Stock Exchange mechanism

Investors who wish to transact through the stock exchange shall place orders for redemptions as currently practiced for secondary market activities. [®] Finance Act, 2023 has amended surcharge rates for individuals and HUFs or association of persons [other than a cooperative society], or body of individuals, whether incorporated or not, or an artificial juridical person referred to in sub-clause (vii) of clause (31) of section 2 who opt for the new tax regime under section 115BAC. As per the amended section, the maximum rate of surcharge shall be 25% for income computed under section 115BAC of the Income tax Act, 1961 (new tax regime) instead of 37% under normal provisions (Old tax regime). The new tax regime would be the default tax regime from FY 2023-24 onwards.

^The Finance Act, 2022 has levied the surcharge to be at par with Equity Oriented Scheme with effect from 1 April 2022

**In case company opts for new regime of taxation, then the surcharge would be applicable at the rate of 10% irrespective of the taxable income.

Specified Mutual Fund" means a Mutual Fund by whatever name called, where not more than thirty five per cent. of its total proceeds is invested in the equity shares of domestic companies. Finance Act 2023 has inserted Section 50AA in the Income Tax Act, 1961. As per the said section, with effect from 1 April 2023, gains/losses from units of Specified Mutual Fund would be deemed to be short term capital gain/loss irrespective of period of holding i.e. the definition of holding for more than 36 months to be considered as long term capital asset is withdrawn. This is applicable for all such units which are acquired on or after Apr 1, 2023.

*The Finance Act 2021 introduced special provisions for higher rate of TDS in case of non-filers of Income tax return (referred to as "specified person"). Specified person does not include a non-resident who does not have permanent establishment in India. Finance Act 2023, with effect from 1st April, 2023, amended the said proviso to also exclude a person who is not required to furnish the return of income for the assessment year relevant to the said previous year and is notified by the Central Government in the Official Gazette in this behalf.

Any person entitled to receive any sum or income or amount, on which tax is deductible under Chapter XVIIB (hereafter referred to as deductee), shall furnish his Permanent Account Number to the person responsible for deducting such tax (hereafter referred to as deductor), failing which tax shall be deducted at the higher of the following rates, namely:

- (i) at the rate specified in the relevant provision of this Act; or
- (ii) at the rate or rates in force; or
- (iii) at the rate of twenty per cent.

The aforesaid provision dealing with higher taxation in the absence of furnishing Permanent Account Number shall not apply to a non-resident with effect from 1st June, 2016 on furnishing the following details and documents by such non-resident:

- (i) name, e-mail id, contact number;
- (ii) address in the country or specified territory outside India of which the non-resident is a resident;
- (iii) a certificate of his being resident in any country or specified territory outside India from the Government of that country or specified territory if the law of that country or specified territory provides for issuance of such certificate;
- (iv) Tax Identification Number of the non-resident in the country or specified territory of his residence and in case no such number is available, then a unique number on the basis of which the non-resident is identified by the Government of that country or the specified territory of which he claims to be a resident.

In case of investments by NRIs in closed ended funds during NFO, at the time of redemption of units, TDS will be deducted at the applicable rate. However, in respect of those Unit Holders who have acquired the units on the Stock Exchange post listing of units, the Unit Holders would need to provide a certificate from a Chartered Accountant certifying the details of acquisition of units to the Fund within two days of maturity of the Scheme, so as to enable the Fund to deduct TDS at the applicable rates. In the event of such details not being provided, the Fund would deduct TDS on the redemption proceeds at the highest rate of TDS applicable.

For further details on taxation please refer to the clause on Taxation in the SAI.

USA securities

1. General US Taxation Rules with Respect to Foreign Persons

Generally, US imposes tax on foreign person either on gross basis or on net basis. Foreign persons who are not engaged in a trade or business in the US are subject to US gross withholding tax on US source income which is fixed determinable annual or periodical generally called as FDAP income. A foreign person that is engaged in a US trade or business will be subject to US taxation on effectively connected taxable income (ECTI). In addition to the income tax imposed on ECTI, the US also imposes a branch profits tax on foreign corporations that has branch or permanent establishment in US. The branch profit tax is imposed on deemed remittances of after-tax effectively connected earnings and profits of foreign corporation's US branch or permanent establishment. One can claim reduced tax rate or exemption from tax under US income tax treaty. The below discussion is based on the understanding that the Scheme would be treated as a corporation for US tax purposes, and the investors in the Mutual Fund Scheme are not tax resident of the USA or based in the USA. Thus, as long as the Scheme is treated as a corporation for US tax purposes, the investors in the Scheme should not directly be subject to US tax. For purposes of this discussion, a foreign person is a person who is not a US citizen or US resident for tax purposes and includes a foreign entity that is classified as a corporation for US tax purposes.

2. Investment in US listed companies

a) US Taxation on Disposition of Shares of US listed Companies

Subject to the discussion below concerning the taxation of ECTI, generally income from the sale of personal property by a foreign person is not US source income and should not be subject to US taxation. Thus, capital gains received by the Scheme on the disposition of shares of US listed companies, should not be subject to taxation in the US.

Trading in stock or securities is generally not considered US trade or business unless taxpayer is a dealer in stock or securities and effects the trade through US offices directly or through US office of its agent other than independent agent.

However if the Scheme invests in any entities that are treated as partnership for U.S federal income tax purposes and if these partnerships are engaged in a U.S. trade or business, then the Scheme itself would be treated as engaged in such a U.S. trade or business and would likely be required to file a U.S. income tax return and potentially pay U.S. tax on its distributive share of partnership income. It may also be subject to potential withholding tax with respect to sales of an interest in such partnership.

Gain derived by a non-U.S resident from the disposition of a U.S Real Property Interest (USRPI) may be treated as income that is effectively connected with the conduct of a U.S trade of business and thus subject to U.S federal income tax (and to a requirement to file a U.S. income tax return) under the Foreign Investment in Real Property Tax Act (FIRPTA). A USRPI includes an interest in a US Real Property Holding Company (USRPHC) which generally is defined as a US company whose assets, measured by fair market value, consist of 50% or more of USRPIs at any time during a five-year period. Such income is considered to be ECTI with the conduct of a U.S trade of business and is subject to US taxation. A

foreign person who disposes of a USRPI will be subject to a 15% (w.e.f. 16 February 2016) withholding tax on the gross proceeds received and will be required to file a US federal income tax return. The final tax liability on the recognized gain on disposition of the USRPI will be set off by the 15% withholding tax on gross proceeds.

There is an exception that applies to FIRPTA for publicly traded shares of a - Qualified Investment Entity (QIE). The exception provides that if the stock of a QIE is regularly traded on an established securities market located in the USA (e.g., the NYSE), the stock will be treated as a USRPI only in the case of a more than 5% holder (over the course of a 5 year look-back period). The 5% holding is increased to 10% for publicly traded real estate investment trust (REIT). Such exception also applies to the disposition of an interest in a publicly traded partnership (PTP).

Thus, capital gains derived by the Scheme from the sale of regularly traded listed US equities should not be subject to tax in the US provided the Scheme holds an interest of 5% (10% for publicly traded REIT) or less of any class of stock. In cases where the Scheme has held, at any time within the 5-year period ending on the date of disposition, more than 5% (10% for publicly traded REIT) of the shares of a publicly-traded company that is also a USRPI, gain from disposition of such interest is subject to US federal corporate income tax.

If a partnership (including a PTP), is engaged in a U.S. trade or business, and if a non-U.S. partner disposes of the partnership interest, a portion of gain or loss is treated as connected with the conduct of a U.S. trade or business, and is therefore subject to U.S. tax. Such income also generates a requirement to file a U.S. tax return. This provision is not subject to 5% exception as mentioned above for PTPs that are USPRI. US requires 10% withholding if non-U.S. partner disposes of an interest in the partnership. Such tax withheld can be set off against the final tax liability of the partner who sold its interest.

b) Dividend Income

US source non-effectively connected dividend income received by a foreign person is subject to a 30% withholding tax. Thus US source dividends received by the Scheme from investments in US listed companies should be subject to withholding tax of 30%. Such dividend withholding tax can be reduced pursuant to a double tax treaty as discussed further below.

3. Investment in US Mutual Funds (US MF) or Exchange Traded Funds (US ETF)

j. US Taxation on Disposition of Units of US MF or US ETF

As discussed above in point 1, generally income from the sale of personal property by a foreign person is not US source income and should not be subject to US taxation. Thus, capital gains received by the Scheme on the disposition of interests in mutual funds and exchange traded funds (ETF), should not be subject to taxation in the US.

However, if the mutual fund or ETF that is sold is a USRPHC, then the gain is considered to be effectively connected with a U.S. trade or business and thus subject to U.S taxation, unless the mutual fund or ETF whose shares are sold is (a)publicly traded and the investor held an interest of 5% or less in the mutual fund or ETF at all times during the year preceding the sale or (b) the mutual fund is a domestically controlled qualified investment entity.

k. US Taxation on Income Distribution by US MF or US ETF

US source non-effectively connected dividend income received by a foreign person is subject to a 30% withholding tax. A mutual fund or ETF that is not subject to the USRPHC - related rules described above may distribute ordinary dividends which should be subject to 30% withholding tax. Dividends designated by a Regulated Investment Company (RIC) (e.g. a

mutual fund) as capital gain dividends are treated as long term capital gains in the hands of the shareholders. Except as described above for mutual funds or ETFs that otherwise qualify as USRPHCs, because long-term capital gains are sourced to the domicile of the recipient, such capital gain dividends should not be U.S source if the recipient is a non-U.S person, and thus would not be subject to U.S taxation.

A foreign person or other qualified investment entity by a qualified investment entity to the extent attributable to gain from sales or exchanges by the qualified investment entity of USRPIs, is treated as gain from the sale or

exchange of a USRPI by the foreign person unless such distribution is with respect to stock that is publicly traded on a U.S exchange and the foreign person did not own more than 5% (or no more than 10% in the case of a REIT) of such class of stock at any time during the 1-year period ending on the date of distribution. Where the distribution is treated as gain from the sale or exchange of a USRPI, the distribution is treated as income effectively connected to a U.S trade or business, subject to tax at U.S corporate tax rates and withheld on at a rate of 21% of the distribution. The total amount in tax paid should not exceed the liability as determined by applying the U.S corporate rate.

Where distributions from the mutual fund or ETF are characterized as gain from the sale of a USRPI as discussed above, the income is considered effectively connected with the conduct of a U.S trade or business such that the branch profits tax provisions must be considered. The dividend equivalent amounts are subject to withholding tax at a rate of 30%. The dividend equivalent amount is generally equal to a foreign corporation's effectively connected earnings and profits. Generally, gain on disposition of an interest in a USRPHC is excluded from the definition of effectively connected earnings and profits.

4. Treaty Benefits to the Mutual Fund or ETF:

It is likely that the Scheme should be considered as a Person under Indian tax laws and so a tax resident of India and so is likely to be eligible to claim the Double Taxation Avoidance Agreement ('the DTAA' or 'the Treaty') benefits between India and the US on the income earned and tax, if any, payable in the US subject to completion of necessary documentations and the Scheme obtaining a tax residence certificate form the Indian tax authorities. As long as the Scheme is treated as a corporation for US tax purposes, the investors in the Scheme should not directly be subject to US tax. The main benefit of the DTAA is that it reduces the US withholding tax amount with respect to certain U.S. source FDAP payments and may exempt ECTI if it is not attributable to a U.S. permanent establishment.

As per the Treaty:

- iii. The Business income earned by the Scheme in the US should not be taxable in the US if the Fund does not have a permanent establishment in the US; If the Scheme has a permanent establishment in the US, then it will be subject to US tax on profits that are attributable to that permanent establishment. US attributes business profits to U.S. permanent establishments of Indian resident corporations under the same ECTI rules applicable to non-treaty residents with respect to the assets and activities conducted in the permanent establishment. A more limited force of attraction rule is also applicable.; The Scheme could be considered to have a permanent establishment in the US if it invests in a partnership that is engaged in a trade or business in the US;
- iv. Capital gains arising on disposition of USRPIs is taxable in the US as per the US tax laws. There is no exception in the DTAA for US taxation of disposition of USRPIs under the FIRPTA rules;
- v. In general, dividend income beneficially earned by the Scheme in the US should be taxable at the rate of 25% for portfolio ownership interests below 10%;
- vi. Interest income beneficially earned by the Scheme in the US should be subject to withholding tax at the rate of 15% (to the extent not otherwise exempt under US internal rules such as the portfolio interest exception); and
- vii. Any other income should be taxable in the US as per US tax laws.

Luxembourg securities

Taxation on investment in Luxembourg investment funds

There are no withholding taxes on dividends paid by Luxembourg investment funds.

The fund being Non-residing investors (individuals or corporations) are exempt from taxation in Luxembourg on capital gains realized upon sale of their shares in a Luxembourg corporate investment fund (even in cases where they held a substantial shareholding of more than 10%).

Ireland securities

Taxation on investment in an Irish Fund

Where a Shareholder is not resident (or ordinarily resident) in Ireland for Irish tax purposes, an Irish Fund should not deduct any Irish tax in respect of the Shareholder's Shares. In order for the non-Irish resident shareholder to be exempt from Irish Investment Undertaking Tax ("IUT"), it must complete the relevant non-resident declaration and provide a copy of that declaration to the Irish Fund. The declaration may also be provided by an Intermediary who holds Shares on behalf of non-Irish Resident Shareholders provided that, to the best of the Intermediary's knowledge, the Shareholders are not resident (or ordinarily resident) in Ireland.

If this declaration is not received by an Irish Fund (and in the absence of written notice of approval from Revenue Commissioners being obtained by the Irish Fund dispensing with the requirement to provide such a declaration), an Irish Fund should deduct Irish tax in respect of the shares held by the non-Irish Resident Shareholder. An Irish Fund should also deduct Irish tax if the Irish Fund has information which reasonably suggests that a Shareholder's declaration is incorrect. A Shareholder will generally have no entitlement to recover such Irish tax. An Irish Fund must be informed if a Shareholder becomes Irish tax resident. Generally, Shareholders who are not Irish tax resident will have no other Irish tax liability with respect to their Shares. However, if a Shareholder is a company which holds its Shares through an Irish branch or agency, the Shareholder may be liable to Irish corporation tax in respect of profits and gains arising in respect of the Shares (on a self-assessment basis).

In case if the fund is deemed to be a Non-Exempt Shareholders then a Shareholder is subject to tax (e.g. because it has not provided the required non-resident declaration), an Irish Fund should deduct Irish tax on distributions, redemptions and transfers and, additionally, on 'eighth anniversary' events, as described below.

Distributions from an Irish Fund

If an Irish Fund pays a distribution to a non-exempt Shareholder, an Irish Fund should deduct Irish tax from the distribution. The amount of Irish tax deducted will be:

- 1. 25% of the distribution; where the distribution is paid to a shareholder who is an Irish resident company which has made the relevant declaration for the 25% rate to apply.
- 2. 41% of the distribution in all other cases.

Redemptions and transfer of shares

If an Irish Fund redeems Shares held by a non-exempt Shareholder, an Irish Fund should deduct Irish tax from the redemption payment made to the Shareholder. Similarly, if a non-exempt Shareholder transfers (by sale or otherwise) an entitlement to Shares, an Irish Fund will account for Irish Investment Undertaking tax in respect of that transfer. The amount of Irish tax deducted or accounted for will be calculated by reference to the gain (if any) which has accrued to the Shareholder on the Shares being redeemed or transferred and will be equal to:

- 1. 25% of such gain; where the shareholder is an Irish resident company which has made the appropriate declaration for the 25% rate to apply;
- 2. 41% of the gain in all other cases.

If Shares are not denominated in euro, a Shareholder may be liable (on a self-assessment basis) to Irish capital gains taxation on any currency gain arising on the redemption or transfer of the Shares.

"Eighth Anniversary" Events

If a non-exempt Shareholder does not dispose of Shares within eight years of acquiring them, the Shareholder will be deemed for Irish tax purposes to have disposed of the Shares on the eighth anniversary of their acquisition (and any subsequent eighth anniversary). On such deemed disposal, an Irish Fund will account for Irish tax in respect of the increase in value (if any) of those Shares over that eight-year period. The amount of Irish tax accounted for will be equal to:

- 1. 25% of the increase in value of the shares where the Shareholder is a company which has made the appropriate declaration for the 25% rate to apply;
- 2. 41% of the increase in value in all other cases.

Any Irish tax paid in respect of the increase in value of Shares over the eight-year period may be set off on a proportionate basis against any future Irish tax which would otherwise be payable in respect of those Shares and any excess may be recovered on an ultimate disposal of the Shares.

Share Exchanges

Where a Shareholder Exchanges Shares on arm's length terms for other Shares in the Irish Fund and no payment is received by the Shareholder, an Irish Fund should not deduct Irish tax in respect of the exchange.

Stamp Duty on transacting in shares

No Irish stamp duty (or other Irish transfer tax) will apply to the issue, transfer or redemption of Shares. If a Shareholder receives a distribution in specie of assets from the ICAV, a charge to Irish stamp duty could potentially arise.

Taxation on investment in Irish Exchange Traded Funds (ETFs)

Similar to active funds, ETFs are exempt from Irish tax on income and gains derived from their investments and are not subject to Irish tax on their net asset value. As such income and gains arising to an ETF are allowed to accumulate gross of Irish tax.

Non-Irish Resident Shareholders do not suffer any Irish tax on the occurrence of a chargeable event (e.g. distribution or redemption) provided that the relevant non-resident declaration has been provided to the fund. If the relevant declaration is not in place the ETF may be obliged to withhold tax at the appropriate rate. However, withholding tax does not need to be applied in the event that shares are held in a recognized clearing system (regardless of whether or not there is a declaration in place).

D. COMPUTATION OF NAV

NAV of Units under the Scheme will be calculated by following method shown below:

NAVs will be rounded off to three decimal places and will be computed and declared on every Business Day, as of the close of such Business Day. The valuation of the Schemes' assets and calculation of the Schemes' NAV shall be subject to audit on an annual basis and such regulations as may be prescribed by SEBI from time to time.

The first NAV will be calculated and announced within 5 Business Days from the date of allotment.

Note: There will be more than one NAV, one for each option, after the declaration of the first IDCW.
